Abstract	xiii
Table of Contents	xv
List of Figures	xix
List of Tables	xxi
1 Introduction	1
1.1 Affective Computing and Human-Computer Interaction (HCI) . . .	3
1.2 Modes of Emotion Communication	4
1.3 Affect or Emotion Analysis in Natural Language Text	5
1.4 Motivation and Objectives of Our Work	7
1.5 Overview of our work	8
1.6 Contributions of the Thesis	10
1.7 Organization of the Thesis	13
2 Related Works on Emotion Classification of Text Data	17
2.1 Keyword Spotting model	18
2.2 Lexical Affinity based Models	26
2.3 Machine Learning based Models	30
2.4 Knowledge based Models	37
2.5 Summary	40
3 Emotion Corpus and Annotation	43
3.1 Existing Corpora for Emotion Analysis	43
3.2 Selection of Corpus Genre	46
3.3 Corpus Collection	47
3.4 Annotation Scheme	48
3.5 Annotation Experiment	50
3.6 Annotation Statistics	51
3.6.1 Crisp Annotation Statistics	52
3.6.2 Fuzzy Annotation Statistics	53
3.7 Summary	57
4 Agreement Measurement in Crisp Multi-label Annotation	59
4.1 A Review of Existing Agreement Measures	60
4.2 Agreement Study in Emotion Corpus	64

4.3	Motivation for a new Agreement Measure	66
4.4	Notion of Paired Agreement	67
4.5	Proposed Agreement Measure A_m	68
4.5.1	Observed Agreement (A_o)	68
4.5.2	Expected Agreement (A_e)	69
4.6	An Example of Agreement Measure Computation	70
4.7	Determining Aggregated View of Multiple Annotators	73
4.8	Study on Emotion Corpus Quality	75
4.8.1	Values Related to Agreement Measure A_m	75
4.8.2	Sampling Characteristics	76
4.8.3	Agreement Study	76
4.9	Corpus Filtering	78
4.9.1	Identifying Ambiguous Categories	78
4.9.2	Corpus Cleaning Decision	82
4.9.3	Agreement on Cleaned Corpus	84
4.10	Aggregated Corpus Statistics	85
4.11	Summary	86
5	Agreement Measurement in Fuzzy Annotation	89
5.1	Cronbach's alpha	91
5.2	Problem Reformulation	92
5.3	Measuring Reliability of our Six Class Corpus	93
5.3.1	Analysis of Anger Class	94
5.3.2	Analysis of Disgust Class	95
5.3.3	Analysis of Fear Class	96
5.3.4	Analysis of Happiness Class	97
5.3.5	Analysis of Sadness Class	98
5.3.6	Analysis of Surprise Class	99
5.3.7	Summary of Analysis	100
5.4	Measuring Reliability of Four Class Corpus	102
5.5	Generating Aggregation	103
5.6	Aggregated Corpus Statistics	104
5.7	Summary	108
6	Feature Extraction for Emotion Classification	111
6.1	Word Feature	113
6.2	Polarity Based Feature	114
6.2.1	Identification of Subject, Object and Verb Phrases	115
6.2.2	Assignment of Subject, Object and Verb Phrase Polarity	120
6.2.3	An Example of Polarity Feature Computation	122
6.3	Semantic Frame Feature	124
6.4	Summary	125
7	Multi-label Classification of Emotion	127
7.1	Multi-Label Classification	128
7.2	Crisp Multi-label Classification	129

7.2.1	Algorithm Adaptation Method: Multi-Label κ NN (ML κ NN)	130
7.2.2	Problem Transformation Method: Random k-Label sets (RAKEL)	133
7.3	Fuzzy Classification Framework	135
7.4	Evaluation Measures	138
7.4.1	Example based Measures	139
7.4.2	Ranking based Measures	140
7.4.3	Label based Measures	141
7.4.4	Distance based Measure	142
7.5	Experiments on Emotion Classification	142
7.5.1	Experimental Design	143
7.5.2	Experiments with ML κ NN	144
7.5.3	Experiments with RAKEL	150
7.5.4	Experiment with F κ NN	153
7.5.5	Comparison of Algorithms	157
7.6	Summary	158
8	Conclusions and Future Directions	161
8.1	Summary of Contributions	161
8.2	Summary of Findings	163
8.3	Future Directions	164
	Bibliography	167
	Appendix A	187
	Appendix B	189
