Abstract			x	
Contents			xi	
Chapter 1	Introd	uction	1	
1.1	Object	ives	3	
Chapter 2	Literat	ture review	5	
2.1	Introd	uction	5	
2.2	Fractu	re mechanics- an outline	5	
	2.2.1	LEFM vis-à-vis EPFM	5	
	2.2.2	CTOD parameter	6	
	2.2.3	J-integral parameter	7	
	2.2.4	Tearing modulus	9	
2.3	Cyclic 2.2.1	J-R curve	10	
	2.3.1	Dowling's low cycle langue analysis	11	
	2.3.2	Cyclic <i>J-R</i> curve for $R > 0$ and $R < 0$	14	
2.4	Load-controlled cyclic fracture tests			
2.5	Acoust	Dringing and sources of acoustic emission	22	
	2.5.1		22	
	2.5.2	i ypes of acoustic emission signals	23	
	2.5.3	Acoustic emission during ductile fracture	23	
2.6	AISI 304LN stainless steel used in nuclear power plant 2			
2.7	Appra	isal of the problem	29	

Chapter 3	The selected st	31	
3.1	Introduction	31	
3.2	Experimental	31	
	3.2.1 Chem	ical analysis	32
	3.2.2 Metal	lographic specimen preparation	32
	3.2.3 Metal	lographic examination	32
	3.2.4 Hardr	less evaluation	34
	3.2.5 Tensi	le testing	34
	3.2.6 Fracto	ographic examination	36
3.3	Results and di	scussion	36
	3.3.1 Chem	istry, microstructure and hardness	36
	3.3.2 Tensi	le deformation behaviour	38
3.4	Summary	56	
Chapter 4	Displacement	controlled fracture behavior of AISI	59
4 1	304LN stainles	ss steel and its weldment	50
4.1	Introduction		59
4.2	Experimental	procedure	61
	4.2.1 Speci	tonio Lintogral tost	61
	4.2.2 Mollo	Lintegral test	65
	4.2.3 Cyclic 4.2.4 Conor	ortion of LP surve under monotonic and	60
	4.2.4 Gener cyclic	<i>J</i> -integral test	09
	4.2.5 Fracto	ography	72
4.3	Results and di	72	
	4.3.1 Deter	mination of the monotonic <i>J</i> -integral fracture	72
	4.3.2 Detern tough	mination of the cyclic <i>J</i> -integral fracture	76
	4.3.2.	1 Effect of stress ratio on cyclic fracture toughness	77
	4.3.2.	2 Effect of plastic displacement on cyclic fracture toughness	80
	4.3.2.	3 Determination of critical J and dJ/da under cyclic J-integral tests	82
	4.3.3 Micro steel	mechanisms of fracture in the investigated	85
4.4	Conclusions		90
	T and a set of the		01
Chapter 5	Load controlle	91	
5.1	Introduction	91	

5.2	Experimental procedure		
	5.2.1	Specimen preparation and fatigue pre-cracking	93
	5.2.2	Load controlled cyclic fracture tests	93
5.3	Results	and discussion	94
	5.3.1	Load controlled cyclic fracture behaviour of AISI 304LN SS and its weldments	95
	5.3.2	Load controlled vis-à-vis displacement controlled cyclic fracture tests of AISI 304LN SS and its weldments	96
	5.3.3	Master curve to account for cyclic tearing in components and in specimens	99
5.4	Conclus	sions	103
Chapter 6	A comp	arative assessment of acoustic emission and	105
	convent	tional load-displacement analysis for detection of	
61	crack II Introdu	nitiation	105
0.1	Introdu		105
6.2	Experii	nental procedure	106
	6.2.1	Acoustic emission during fracture toughness test	106
6.3	Results and discussion		
	6.3.1	Detection of the point of crack initiation by AE characteristics	108
	6.3.2	Determination of fracture toughness by AE technique	113
6.4	Conclu	sions	120
Chapter 7	Genera	l conclusions and suggestions for future work	121
