Abstract xx

Contents xxi

Chapter 1 Introduction 1-29

1.1 Introduction to laser forming process 1-7

1.2 Literature Review 7-27

1.2.1 Continuous wave (CW) laser bending 8-20

1.2.2 Pulsed laser bending 20-22

1.2.3 2D and 3D laser forming 22-26

1.3 Research gaps and motivation of the study 27

1.4 Aims and Objectives 27-28

1.5 Contributions made in this thesis 28

1.6 Outline of the thesis 29

1.7 Summary 29

Chapter 2 Tools and techniques used 33-57

2.1 Finite element analysis of laser forming process 33-43

2.2 Statistical regression analysis 43-48

2.2.1 Statistical design of experiments 43-45

2.2.2 Response surface methodology 45-47

2.2.3 Desirability function analysis 47-48

2.3 Soft computing-based methods 49-56

2.3.1 Neural network-based analysis 49-52

2.3.2 Neuro-fuzzy system-based analysis 52-55

2.3.3 Cross validation method 55-56

2.4 Summary 56-57

Chapter 3 Finite element analysis and experimental study on laser bending process 61-86

3.1 Experimental set up and procedure for laser bending 61-63

3.2 Continuous wave laser bending 63-77

3.2.1 Finite element modeling 63-69

3.2.2 Analytical models of bending angle 70

3.2.3 Results and discussion of CW laser bending 70-73

3.2.4 Metalurgical study on CW laser bent samples 74-77

3.3 Pulsed laser bending 77-84

3.3.1 Mathematical theory of pulsed laser forming 78-79

3.3.2 Effects of gap and overlap on bending angle in PLB process 79-80

3.3.3 Metalurgical study on pulsed laser bent samples 81-84

3.4 Comparison between continuous and pulsed laser bending 84-85

3.5 Summary 85-86

Chapter 4 Modeling and analysis of CW laser bending process 89-118

4.1 Experimental data collection 89-90

4.2 Statistical regression analysis 90-100

4.2.1 Modeling of bending angle 90-99

4.2.2 Optimization of bending angle 99-100

4.3 Soft computing-based analysis 100-117

4.3.1 Forward analysis or modeling of bending angle 100-109

4.3.2 Inverse analysis or process synthesis to predict the process parameters 109-117

4.4 Summary 118

Chapter 5 Modeling and analysis of pulsed laser bending process 121-144

5.1 Experimental data collection 121-122

5.2 Statistical regression analysis 122-129

5.3 Soft computing-based analysis 130-144

5.3.1 Forward analysis or modeling of bending angle 130-137

5.3.2 Inverse analysis or process synthesis to predict the process parameters 137-144

5.4 Summary 144

Chapter 6 Modeling and analysis of 3D laser forming process 147-167

6.1 Experimental set up and procedure 147-150

6.1.1 Materials and equipment 147-148

6.1.2 Eperimental procedure and plans 148-150

6.2 Statistical regression analysis 150-154

6.2.1 Response surface modeling and analysis of dome height 151-153

6.2.2 Optimization of dome height using desirability function analysis 153-154

6.3 Soft computing-based analysis 154-167

6.3.1 Forward analysis or modeling of dome height 154-162

6.3.2 Inverse analysis or process synthesis of 3D laser forming 163-167

6.4 Summary 167

Chapter 7 Conclusions and scope for future study **171-176**

7.1 Concluding remarks 171-174

7.2 Scope for future works 174-176

References **179-188**

Appendices **191-201**

APPENDIX A 191-195

APPENDIX B 196-199

APPENDIX C 199-201
