Abstract	xv

I: General introduction, materials and methods and Characterisations

Chapter 1: General introduction to sensor materials, scope and objectives

1.1 Introduction	1
1.2 Principles of sensing	3
1.3. Materials in sensor devices	5
1.3.1 Classical materials	5
1.3.2 Polymers as sensing materials	5
1.3.2.1 Different useful aspects of polymers in sensor applications	5
1.3.2.2 Classification of polymers	7
1.3.3 Principles of polymer formation	7
1.3.3.1 Addition polymerization	8
1.3.3.2 Condensation polymerization	9
1.3.4 Polymerization techniques	9
1.3.4.1 Bulk polymerization	10
1.3.4.2 Solution polymerization	10
1.3.4.3 Suspension polymerization	10
1.3.4.4 Emulsion polymerization	11
1.3.4.5 Electrochemical polymerization	12
1.3.4.6 Plasma polymerization	12

1.3.5 Chemical modification of polymers	13
1.3.6 Preparation of polymer film	13
1.4 Polymer applications in major sensors	14
1.4.1 Gas sensor	15
1.4.2 pH sensor	15
1.4.3 Ion selective sensors	15
1.4.4 Humidity sensor	16
1.5 Taste sensor	16
1.6 Non-lipid taste sensor	21
1.7 Scope and objectives of the present investigation	23
1.7.1 Scope	23
1.7.2 Objective	24
1.7.3 Plan of work	24
References	26
 Chapter 2: Materials and methods	
2.1 Introduction	32
2.2. Materials	35
2.3 Experimental Methods	36
2.3.1. Preparation of cross-linked and phosphorylated polyvinyl alcohol membranes	36
2.3.1.1 Preparation of PVA membrane	36
2.3.1.2 Cross-inking of PVA membrane	36
2.3.1.3 Phosphorylation of different cross-linked PVA membranes	37
2.3.2 Preparation of PAA and PVA-PAA blend membrane	38
2.3.2.1 Preparation of PAA membrane	38
2.3.2.2 Preparation of PVA-PAA composite membrane	38
2.3.3 Preparation of PVA-PANI, PAA-PANI and PVA-PAA-PANI composite membranes	39
2.3.4 Preparation of PF6G-PmAP composite membrane	40
2.4 Membrane properties and characterization	41

2.4.1. Moisture absorption study	41
2.4.2. Water absorption study	41
2.4.3. Contact angle measurement	41
2.4.4. Phosphorus estimation	42
2.4.5. C, H, N Analysis	42
2.4.6. FTIR Analysis	42
2.4.7. Scanning electron microscopy / Field emission scanning electron microscopy(SEM/FESEM)	43
2.4.8 XRD Analysis	43
2.4.9 DC Conductivity measurement	43
2.5 Taste response result and discussion	43
2.5.1 Taste sensor set-up	46
2.5.2. Temporal stability of the membrane	48
2.5.3. Response stability of the membrane	48
2.5.4. Reproducibility of the membrane	48
2.5.6. Taste response with multi-analyte solutions	48
References	50

II: Results and Discussion

Chapter 3: Electrical response of the optimally cross-linked and Phosphorylated polyvinyl alcohol membrane towards different taste substances

3.1 Introduction	53
3.2 Membrane preparation and properties	54
3.2.1 Membrane preparation	54
3.2.2 Moisture absorption study	56
3.2.3 Water absorption and swelling behaviours of polymer membranes	57
3.3 Characterization	58
3.3.1 FTIR Analysis	58

3.3.2 XRD Analysis	60
3.4 Study of taste response characteristics	61
3.4.1 Temporal stability	61
3.4.2 Response stability	62
3.4.3 Responses to taste substances	64
3.4.4 Responses of PF2G2P membrane to different taste substances	69
3.4.4 Reproducibility of response patterns	72
3.5 Multi-analyte taste response	77
3.6 Conclusions	78
References	80

Chapter 4: Electrical response of Polyaniline composite membranes towards different basic tastes

4.1 Introduction	82
4.2 Membrane preparation and properties	84
4.3 Characterization	86
4.3.1 FTIR Analysis	86
4.3.2 XRD Analysis	89
4.3.3 Elemental analysis	90
4.3.4 FESEM Analysis	90
4.4 Study of taste response characteristics	91
4.4.1 Temporal stability	93
4.4.2 Response stability	94
4.4.3 Response of the composite membranes to analytes of five different basic tastes	95
4.4.4 Reproducibility of response patterns	97
4.4.5 Response of the polymer membranes towards each group of five basic tastes	103
4.5 Response of PVA-PAA-PAn membrane towards multi-analyte solution	108
4.6 Conclusions	109
References	110

Chapter 5: Electrical response of poly(m-aminophenol)-poly(vinyl alcohol composite membranes towards substances of different basic tastes

5.1. Introduction	113
5.2 Membrane preparation and properties	115
5.3 Characterisation	117
5.3.1 FTIR Analysis	117
5.3.2 XRD Analysis	118
5.3.3 FESEM Analysis	119
5.4 Study of the taste response characteristics	119
5.4.1 Temporal stability	120
5.4.2 Stability of response	121
5.4.3 Taste response patterns to five different basic tastes	122
5.4.4 Reproducibility of response patterns	124
5.4.5 Taste response towards each group of five basic tests	125
5.5 Conclusion	129
References	130

Chapter 6: Electrical response of poly(acrylic acid) membrane and poly(acrylic acid)- poly(vinyl alcohol) blend membrane towards different taste substances

6.1. Introduction	133
6.2 Membrane preparation and properties	134
6.2.1 Moisture absorption study	134
6.2.2 Water absorption and swelling behaviours of PAA and PVA-PAA membranes	135
6.2.3 FTIR Analysis	136
6.2.4 XRD Analysis	137
6.3 Study of the taste response characteristics	138
6.3.1 Temporal stability	139
6.3.2 Response stability	139
6.3.3 Taste response patterns to five different basic tastes	140
6.3.4. Reproducibility of response patterns	143

6.3.4. Taste response towards each group of five basic tastes	145
6.4 Conclusion	148
References	149

Chapter 7: Data analysis of taste response measurement

7.1 Introduction	151
7.2. Experimental: Taste sensor materials and methods	153
7.2.1 Materials	154
7.3. Measurement and data analysis	155
7.3.1. Measurement procedure	155
7.3.2. Software application and data analysis	155
7.3.2.1 Analysis results	156
7.4 Results and discussion	164
7.5 Conclusions and limitations	165
References	166

Chapter 8: Summary & Conclusion
