| Abstract | xxvii |
| 1 Introduction | 1 |
| 1.1 Background and Motivation | 2 |
| 1.2 Summary of Contributions | 6 |
| 1.3 Organization of the Thesis | 7 |
| 2 Background and Review | 9 |
| 2.1 Cryptography | 9 |
| 2.1.1 Cryptographic goals | 10 |

| | | |
|---------|--|----|
| 2.1.2 | Cryptographic primitives | 11 |
| 2.1.3 | Cryptanalysis | 13 |
| 2.2 | Mathematical Background | 14 |
| 2.2.1 | Intractability and reduction | 14 |
| 2.2.2 | Intractability assumptions | 14 |
| 2.2.3 | Polynomial-time distinguishability | 15 |
| 2.3 | Cryptographic Protocols | 16 |
| 2.3.1 | Protocols for authentication and key establishment | 17 |
| 2.3.2 | Security properties and adversary | 18 |
| 2.3.3 | Attacks on protocols | 20 |
| 2.3.4 | Performance of protocols | 22 |
| 2.4 | Security Analysis of Protocols | 23 |
| 2.4.1 | Formal methods for security analysis | 23 |
| 2.5 | Provable Model of Security | 24 |
| 2.5.1 | The communication model | 25 |
| 2.5.2 | Security definitions | 26 |
| 2.5.3 | Security assumptions | 27 |
| 2.5.3.1 | Secure signature Scheme | 28 |
| 2.5.3.2 | Secure encryption scheme | 28 |
| 2.5.4 | The existing security models | 29 |
| 2.6 | Review of Key Establishment Protocols | 30 |
| 2.6.1 | Two-party key establishment | 31 |
| 2.6.1.1 | Protocols using symmetric key | 31 |
| 2.6.1.2 | Protocols using public key | 33 |
| 2.6.1.3 | Protocols using one-way hash function | 34 |
| 2.6.1.4 | Security protocols for mobile communication | 34 |
| 2.6.2 | Group key establishment | 35 |
| 2.6.2.1 | Multi-round protocols based on group Diffie Hellman . | 36 |
| 2.6.2.2 | Constant round protocols | 37 |

| | | |
|----------|--|-----------|
| 2.6.2.3 | Protocols for resource constrained environment | 39 |
| 2.6.2.4 | Hierarchical group key establishment protocols | 40 |
| 2.7 | Summary | 41 |
| 3 | Key Establishment Protocols Using One-way Functions | 43 |
| 3.1 | Introduction | 43 |
| 3.2 | Analysis of Existing Protocols | 45 |
| 3.2.1 | Insider replay | 46 |
| 3.2.2 | Analysis of <i>insider replay</i> | 49 |
| 3.3 | Protocols Using One-way Hash Functions | 50 |
| 3.3.1 | Server controlled key establishment (HKE-SC) | 52 |
| 3.3.2 | Single user controlled key establishment (HKE-SUC) | 54 |
| 3.3.3 | Hybrid controlled key establishment (HKE-HC) | 56 |
| 3.3.4 | Key chosen by both the users (HKE-UC) | 57 |
| 3.4 | Analysis of the Protocols | 59 |
| 3.4.1 | Analysis of security properties | 59 |
| 3.4.2 | Analysis against security attacks | 60 |
| 3.5 | The Security Proof | 61 |
| 3.5.1 | Proof of HKE-SC protocol | 62 |
| 3.6 | Performance of the Protocols | 65 |
| 3.6.1 | Computational analysis | 65 |
| 3.6.1.1 | Major computations | 66 |
| 3.6.1.2 | Experimental results | 66 |
| 3.6.2 | Communication analysis | 67 |
| 3.6.3 | Comparison with existing protocols | 67 |
| 3.7 | Summary | 68 |
| 4 | Polynomial Interpolation Based Group Key Agreement Protocol | 69 |
| 4.1 | Introduction | 69 |
| 4.1.1 | Contribution | 71 |

| | | |
|----------|--|-----------|
| 4.2 | Security Properties and Adversary | 72 |
| 4.3 | User-verifiable Contributory Key Agreement | 75 |
| 4.3.1 | Polynomial interpolation | 75 |
| 4.3.2 | Proposed protocol VGKA | 77 |
| 4.3.3 | Discussions | 80 |
| 4.3.4 | Dynamic handling of user join and leave | 82 |
| 4.3.5 | An illustrative example | 83 |
| 4.4 | Security Analysis of VGKA Protocol | 85 |
| 4.4.1 | Analysis against security properties | 85 |
| 4.4.2 | Analysis against common attacks | 87 |
| 4.4.3 | Formal security proof | 88 |
| 4.5 | Efficiency Analysis of VGKA Protocol | 91 |
| 4.5.1 | Computational analysis of VGKA | 91 |
| 4.5.2 | Communication analysis | 93 |
| 4.5.3 | Performance and security comparison | 94 |
| 4.6 | Summary | 96 |
| 5 | Scalable Group Key Agreement Protocols for Resource Constrained Environment | 97 |
| 5.1 | Introduction | 97 |
| 5.2 | Protocol VGKA-2 | 98 |
| 5.2.1 | Protocol description | 99 |
| 5.2.2 | Analysis and efficiency comparison of VGKA-2 protocol | 101 |
| 5.2.2.1 | Computation analysis | 101 |
| 5.2.2.2 | Communication analysis of VGKA-2 | 103 |
| 5.2.2.3 | Comparison of VGKA-2 with existing protocols | 103 |
| 5.2.3 | Security proof | 104 |
| 5.3 | Key Agreement in User Groups | 106 |
| 5.4 | Extension to Hierarchy | 107 |
| 5.4.1 | The protocol sketch for VGKA-H | 109 |

| | | |
|----------|---|------------|
| 5.4.2 | Discussions on properties and performance of VGKA-H | 111 |
| 5.4.2.1 | Comparison of VGKA-H with existing protocols | 111 |
| 5.4.3 | Analysis and comparison of VGKA-H | 112 |
| 5.5 | Summary | 113 |
| 6 | Authentication and Key Agreement Protocols for Secure Mobile Communication | 115 |
| 6.1 | Introduction | 115 |
| 6.1.1 | The mobile architecture | 116 |
| 6.1.2 | Authentication and key agreement in existing mobile standards . . | 117 |
| 6.2 | 3GPP Based Authentication and Key Agreement | 119 |
| 6.2.1 | 3GPP-AKA standard | 119 |
| 6.2.2 | Analysis of the 3GPP-AKA protocol | 122 |
| 6.3 | Proposed Protocol for 3GPP-AKA | 124 |
| 6.3.1 | User is in home environment | 125 |
| 6.3.2 | User is in visiting environment | 126 |
| 6.3.3 | Perfect forward secrecy | 128 |
| 6.3.4 | Security and performance analysis | 130 |
| 6.4 | Authentication and Key Agreement for CDMA | 132 |
| 6.4.1 | CDMA2000 (3GPP2) standard | 133 |
| 6.4.2 | Analysis of the protocol | 136 |
| 6.4.3 | Proposed protocol | 136 |
| 6.4.4 | Analysis | 138 |
| 6.5 | End-to-end Security | 138 |
| 6.5.1 | The protocol for security between <i>SN</i> and <i>HN</i> | 139 |
| 6.5.2 | Security analysis of the protocol | 140 |
| 6.6 | Summary | 142 |
| 7 | Conclusion and Future Works | 143 |
