Declaration	xi
Nomenclature	xiii
Abstract	ixx
Contents	xxi
List of Figures	xxv
List of Tables	xxix

Chapter 1:	Introduction	1
1.1	Indirect cooling systems	1
1.1.1	Advantages of indirect refrigeration systems	2
1.1.2	Disadvantages of indirect refrigeration systems	3
1.2	Natural Circulation Loop	3
1.2.1	Advantages of NCL	6
1.2.2	Disadvantages of NCL	7
1.2.3	Applications of NCL	8
1.3	Selection of working fluids for natural circulation loops	9
1.3.1	Commonly used secondary fluids	9
1.3.2	Suitability of CO ₂ as a secondary fluid	10
1.4	Objective of the present work	12
1.5	Structure of thesis	12

Chapter 2:	Literature Review	15
2.1	Secondary coolant systems	15

Contents

2.2	Natural Circulation Loops	16
2.2.1	Single phase natural circulation loops	17
2.2.1.1	Theoretical studies	17
2.2.1.2	Experimental studies	22
2.2.2	Two phase natural circulation loops	23
2.2.2.1	Theoretical studies	23
2.2.2.2	Experimental studies	24
2.3	Applications of NCL in different engineering fields	25
2.4	Application areas of CO ₂ based systems	27
2.5	Commercial aspects of CO ₂ systems	29
2.6	CO ₂ based secondary loop systems	30
2.7	High pressure safety issues	32
2.8	Thesis objective and contribution	33
Chapter 3: On the suitability of CO₂ in natural circulation loops		35
3.1	Introduction	35
3.2	Property comparison of different fluids	38
3.3	Performance of chosen fluids in NCL	40
3.4	Summary	44
Chapter 4: Steady state performance of NCL		45
4.1	Studies on NCL with point heat source and sink	45
4.1.1	Mathematical modeling	46
4.1.2	Performance of NCL in household refrigerator	50
4.1.3	Performance of NCL in cold storage	52
4.2	NCL with end heat exchangers	53
4.2.1	Single phase	53
4.2.1.1	Mathematical formulation	53
4.2.1.2	Results and discussion	59
4.2.2	Two phase	66
4.2.2.1	Mathematical formulation	67
4.2.2.2	Results and discussion	73

4.3	Summary	79
Chapter 5: Applications of NCL in different R&AC systems		81
5.1	CO ₂ based NCL for water cooler application	81
5.1.1	System description and mathematical model	81
5.1.2	System of equations	83
5.1.3	Heat transfer and friction factor correlations	84
5.1.4	Estimation of pressure drop on R22 side	85
5.1.5	Numerical Procedure	85
5.1.6	Results and discussion	88
5.2	Studies on a room air conditioner coupled to a CO ₂ based natural circulation loop	95
5.2.1	System description and mathematical model	95
5.2.2	System of equations	96
5.2.3	Results and discussion	102
5.3	Summary	112
Chapter 6: Experimental studies on CO₂ based NCL		115
6.1	Introduction	115
6.2	The experimental facility	115
6.3	Experimental Procedure	119
6.4	Data reduction	121
6.5	Results and discussion	122
6.5.1	Vapour phase results	122
6.5.2	Liquid and liquid-vapour phase results	128
6.5.3	Comparison of experimental results with literature	137
6.5.4	Behavior of system under changing warm water inlet temperatures	138
6.6	Summary	140
Chapter 7: Conclusions and Scope of Future Work		141
7.1	Based on the literature survey	141
7.2	Conclusions based on theoretical studies	142
7.2.1	Comparison between different working fluids in NCL	142

Contents

7.2.2	Studies on point heat source/sink	142
7.2.3	Studies on single and two phase loops with end heat exchangers	143
7.2.4	Studies on NCL coupled vapour compression type water cooler	143
7.2.5	Studies on NCL coupled vapour compression type air conditioner	144
7.2.6	Experimental studies on CO ₂ based natural circulation loops	144
7.3	Scope for future work	145
