Chapter 1 Introduction and Review of Literature	
1 Introduction and Review of Literature	1
1.1 Energy and its global demand	1
1.2 Basics of biofuels	1
1.3 Biomethane	2
1.4 Anaerobic digestion of organic wastes	4
1.5 Classification of wastes	5
1.6 Agro-industrial wastes	6
1.7 Anaerobic digestion of potato wastes	7
1.8 Anaerobic digestion of vegetable/kitchen waste	9
1.9 Anaerobic digestion of *Pistia stratiotes* (an aquatic weed)	9
1.10 Bottlenecks of process parameters that govern methane production efficiency	12
1.10.1 Influence of inoculum	12
1.10.2 pH	13
1.10.3 Inhibitory action of VFA	14
1.10.4 Variation in C:N	15

1.11 Anaerobic codigestion of agrowastes for biomethane production 15
1.12 Kinetic modeling of anaerobic digestion process 17
1.13 Application of digested slurry as biofertilizer 19
1.13.1 Bulk density (BD) 20
1.13.2 Porosity 20
1.13.3 Soil organic matter 20
1.13.4 pH 21
1.13.5 Total C and N 21
1.14 Biogas slurry as plant growth promoter 21
1.15 Research gap 22
1.16 Objectives 23
Chapter 2 Materials and Methods
2 Materials and Methods 25
2.1 Materials 25
2.1.1 Substrates 25
2.1.1.1 Potato Wastes (PW) 25
2.1.1.2 Kitchen Wastes (KW) 25
2.1.1.3 *Pistia stratiotes* (PS) 25
2.1.2 Inoculum for biomethane production 26
2.1.3 Inoculum for biomanure production 27
2.1.4 Media 29
2.1.4.1 Inoculum media 29
2.1.4.2 Basal media and its constituents 30
2.1.5 Anaerobic digestion 31
2.2 Methods 31
2.2.1 Characterization of substrate 31
2.2.1.1 Moisture and total solid (TS) 31
2.2.1.2 Ash and volatile solid (VS) content 32
2.2.1.3 Total soluble sugar 32
2.2.1.4 Cellulose 33
2.2.1.5 Hemicellulose 33

2.2.1.6 Lignin	33
2.2.1.7 Volatile fatty acids	34
2.2.1.8 Total alkalinity	34
2.2.2 Biogas	35
2.2.3 Estimation of nutrients (N, P and K) in the substrate and digestate	35
2.2.3.1 Diacid digestion of the samples	35
2.2.3.2 Estimation of phosphorous by colorimetric method	36
2.2.3.2.1 Preparation of Barton's reagent	36
2.2.3.2.2 Procedure	36
2.2.3.3 Estimation of potassium (K) by flame photometric method	36
2.2.3.3.1 Preparation of working standard K solution	36
2.2.3.3.2 Procedure	36
2.2.4 Ultimate analysis by elemental analyzer	37
2.2.5 Bulk density and porosity of soil	37
2.2.6 Isolation and Enrichment of Methanogens	37
2.2.7 Specific methanogenic activity (SMA)	38
2.2.8 Determination of suitable consortia from the selected strains	39
2.2.9 Determination of growth pattern of isolated strains	40
2.2.10 SEM analysis	40
2.2.11 Optimization of process parameters	41
2.2.11.1 Experimental design for optimization and statistical analysis by RSM	41
2.2.11.2 Artificial Neural Network (ANN)	42
2.2.11.3 Genetic Algorithm (GA)	43
2.2.11.4 Verification of data	44
2.2.11.4.1 Evaluation of model predictability	44
2.2.12 Theoretical calculation of biomethane yield	44
2.3 Equipment	44
2.4 Chemicals	46
2.5 Sterilization	46

	2.6 Software	47
Chapter 3	**Characterization of inoculum for biomethanation process**	
	3 Introduction	49
	3.1 Inoculum and its characteristics	49
	3.1.1 Growth characteristics of non-methanogenic strains	50
	3.1.1.1 Characteristics of *Aneurinibacillus migulans, Staphylococcus epidermidis, Corynebacterium nuruki* and their growth pattern	51
	3.1.1.2 Characteristics of *Enterobacter cloacae, Bacillus subtilis, Pseudomonas aeruginosa* and their growth pattern	52
	3.1.1.3 Kinetic parameters of non-methanogenic strains (1-6)	54
	3.1.2 Growth characteristics of methanogenic strains	56
	3.1.2.1Characteristics of *Methanosarcina barkeri* and *Methanosaeta* sp. and their growth pattern	56
	3.1.2.2 Kinetic parameters of methanogenic strains (7 and 8)	57
	3.2 Fluorescence microscopic examination of methanogenic strains	58
	3.3 pH profiling of digestion process with the chosen substrates and MAC	59
	3.4 Determination of suitable consortia from the selected strains	61
	3.5 Specific methanogenic activity (SMA)	63
	3.6 Discussion	65
Chapter 4	**Substrate Characterization, Evaluation and Optimization of Anaerobic Codigestion Process**	
	4 Introduction	75
	4.1 Characteristics of substrate	75
	4.1.1 Proximate analyses of PW, KW and PS	75
	4.1.2 Ultimate analysis	76
	4.1.3 Biochemical analysis of PW, KW and PS	77
	4.2 Evaluation of anaerobic codigestion process	78
	4.2.1 Codigestion experiment-PW+PS	78
	4.2.1.1 Biogas profile	78
	4.2.2 Codigestion experiment-KW+PS	82

4.2.2.1 Biogas profile 82
4.2.3 Triple substrate codigestion of PW, KW and PS 84
4.2.3.1 Biogas profile 84
4.3 Assessment of synergistic effect during codigestion 86
4.4 SEM analysis 87
4.5 Optimization of process parameters for anaerobic codigestion 88
4.5.1 Selection of process parameters by OVAT 88
4.5.1.1 Effect of substrate concentration 88
4.5.1.2 Effect of cosubstrate proportion 90
4.5.1.3 Effect of inoculum concentration 93
4.5.2 Optimization of anaerobic codigestion by CCD-RSM 94
4.5.2.1 Optimization of anaerobic codigestion of PW+PS 95
4.5.2.1.1 Analysis of variance (ANOVA) for the mixture of PW and PS 97
4.5.2.1.2 Response surface plots for codigestion mixture of PW and PS 98
4.5.2.1.3 Validation of the model for codigestion mixture of PW and PS 100
4.5.2.2 Optimization of anaerobic codigestion of KW and PS 101
4.5.2.2.1 Analysis of variance for the codigestion mixture of KW and PS 102
4.5.2.2.2 Response surface plots of the codigestion mixture of KW and PS 102
4.5.2.2.3 Validation of the model of codigested mixture of KW and PS 104
4.5.3 Optimization of anaerobic codigestion by ANN-GA 106
4.5.3.1 Optimization of anaerobic codigestion mixture of PW and PS by ANN-GA 107
4.5.3.1.1 Validation based on GA for codigestion mixture of PW and PS 107
4.5.3.2 Optimization of anaerobic codigestion mixture of KW and PS by ANN-GA 109

4.5.3.2.1 Validation based on GA for codigestion mixture of KW and PS 110
4.6 Discussion 112
Chapter 5 Kinetic Modeling of Anaerobic Codigestion Process
5 Introduction 123
5.1 First order kinetic model 123
5.1.1 Determination of maximum biogas yield (M_u) 125
5.1.2 Model fit for first order kinetic 125
5.2 Modified Gompertz model 127
5.3 Unstructured segregated model 129
5.3.1 Theoretical considerations of the model 134
5.3.2 Methane correlation plot 141
5.4 Discussion 143
Chapter 6 Nutrient Enrichment of Residual Slurry for its Utilization as Biomanure
6 Introduction 151
6.1 Nutrient enrichment of residual slurry (digestate) 152
6.1.1 Nitrogen enrichment 152
6.1.2 Phosphorous enrichment 153
6.1.3 Potassium enrichment 153
6.2 Field application of biomanure 156
6.2.1 Effect on plant growth 157
6.2.1.1 Height of the plant 157
6.2.1.2 Number of leaves 158
6.2.1.3 Average number and size of fruits 158
6.3 Soil quality parameters 160
6.3.1 Bulk density 160
6.3.2 Porosity 161
6.3.3 Soil organic matter 162
6.3.4 Total C and N 162
6.3.5 pH 162

6.4 Discussion 163
Conclusion 175
