Chapter 1 Introduction and literature review	1
1.1 Surface engineering	1
1.2 Various surface engineering techniques	1
1.3 Laser assisted surface engineering	2
1.3.1 Advantages of laser assisted surface engineering	2
1.3.2 Classification of laser assisted surface engineering techniques	2
1.3.2.1 Laser transformation hardening	4
1.3.2.2 Laser melting	4
1.3.2.3 Laser surface alloying	5
1.3.2.4 Laser cladding	7
1.3.2.5 Pulsed laser deposition (PLD)	9
1.3.2.6 Laser shot peening	10
1.3.2.7 Laser fusion of thermal sprayed deposits	10
1.3.3 Application area of laser assisted surface engineering techniques	11
1.4 Laser assisted surface engineering for hard and wear resistance coating	11

1.4.1	Laser coating by laser surface alloying	12
1.4.2	Laser assisted coatings consisting TiB ₂ , TiC, Al ₂ O ₃ and SiC phases	13
1.4.3	<i>In-situ</i> formation of composite coating consisting TiB ₂ , TiC, Al ₂ O ₃ and SiC phases by laser coating process	18
1.5	Application of high power diode laser (HPDL) for laser surface engineering	22
1.6	Application of sol-gel and laser technologies for ceramic/ceramic composite coating	23
1.7	Ceramic and ceramic matrix composite coating	25
1.7.1	Monolithic ceramic coating	25
(i)	Al ₂ O ₃ coating	26
(ii)	TiB ₂ coating	27
(iii)	TiC coating	29
(iv)	SiC Coating	30
1.7.2	Multi-component ceramic composite	30
1.7.2.1	Two-phase ceramic composite	31
(i)	Al ₂ O ₃ -TiB ₂	31
(ii)	TiB ₂ -TiC	32
(iii)	Al ₂ O ₃ -TiC	33
(iv)	Al ₂ O ₃ -SiC	34
(v)	TiB ₂ -SiC	35
(vi)	SiC-TiC	35
1.7.2.2	Three-phase ceramic composite	35
1.7.2.3	Four-phase ceramic composite	37
1.8	Self-propagating high temperature synthesis (SHS) and laser assisted SHS	38
1.9	Reactions for present work	40
1.10	Wear characteristics of ceramics and laser alloyed/cladded coatings	40
(a)	Adhesive wear	40
(b)	Abrasive wear	41
(c)	Fatigue wear and delaminating wear	41
(d)	Erosive wear	42
(e)	Chemical wear	42

1.11	Modulus of elasticity (E) and fracture toughness (K_{IC}) measurement of the coating	44
1.12	Problem definition and objectives	47
Chapter 2	Experimental planning and procedure	51
2.1	Details of substrate materials	52
2.2	Details of precursor powders	54
2.3	Experimental procedure	54
2.3.1	Phase-1	54
	(i.) Precursor coating prior to laser treatment	55
	(ii.) Laser treatment	55
2.3.2	Phase-2,3 and 4	56
	(i.) Preparation of TiO_2 by sol-gel technique	57
	(ii.) Precursor coating prior to laser treatment	58
	(iii.) Laser treatment	58
2.3.3	Phase-5	61
	(i.) Preparation of SiO_2 powder by sol-gel technique	62
	(ii.) Pre-placement of powder mixture	63
	(iii.) Laser treatment	63
2.4	Physical characterization	65
2.4.1	Scanning electron microscopy (SEM)	65
2.4.2	X-ray diffraction (XRD)	65
2.4.3	High Resolution Transmission Electron Microscopy (HRTEM) analysis	66
2.5	Mechanical characterization	66
2.5.1	Vickers micro-hardness test	66
2.5.2	Tribological tests (ball-on-disc tests)	67
2.5.3	Measurement of modulus of elasticity (E) by nano-indentation procedure	69
2.5.4	Measurement of fracture toughness by indentation method	71

Chapter 3	Feasibility test of the formation of Al_2O_3 - TiB_2 - TiC composite coating on AISI 1020 steel, by laser cladding using CO_2 laser	73
3.1	X-ray diffraction (XRD)	73
3.2	Micro-hardness measurements	74
3.3	Micro-structural analysis	76
3.4	High Resolution Transmission Electron Microscopy (HRTEM) analysis	80
Chapter 4	Development of Al_2O_3 - TiB_2 - TiC composite coating on AISI 1020 steel by high power diode laser	83
4.1	X-ray diffraction (XRD)	84
4.2	Microstructural analysis	85
4.3	Micro-hardness measurements	88
4.4	Sliding wear performance	93
4.5	Morphologies of wear track	96
4.6	Coefficient of friction	99
4.7	Measurement of modulus of elasticity (E), nano-hardness (H) and fracture toughness (K_{IC})	104
4.8	Indentation at the interface of the coating and substrate	110
Chapter 5	Development of Al_2O_3 - TiB_2 - TiC composite coating with powder mixture containing sol-gel derived TiO_2 on AISI 1020 steel substrate, using HPDL	113
5.1	X-ray diffraction (XRD)	113
5.2	Microstructural analysis	114
5.3	Micro-hardness measurements	116
5.4	Sliding wear performance	118
5.5	Co-efficient of friction	122
Chapter 6	Development of Al_2O_3 - TiB_2 - TiC composite coatings on AISI 304 stainless steel substrate using HPDL	125
6.1	X-Ray diffraction (XRD)	125
6.2	Microstructural analysis	126
6.3	Micro-hardness measurements	130
6.4	Sliding wear performance	131
6.5	Coefficient of friction (COF)	135

Chapter 7	Development of Al ₂ O ₃ -TiB ₂ -TiC-SiC composite coating on AISI 1020 steel and AISI 304 stainless steel substrate using CO ₂ laser	137
7.1	X-ray diffraction (XRD)	137
7.2	Microstructural analysis	140
7.3	Micro-hardness	143
7.4	Modulus of elasticity (<i>E</i>) and nano-hardness (<i>H</i>)	145
7.5	Sliding wear performance	146
7.6	Co-efficient of friction	148
7.7	SEM of wear track	149
Chapter 8	General conclusions and future scope of work	151
8.1	General conclusions	151
8.2	Major contributions	155
8.3	Future scope of work	156
