Abstract	i
List of symbols	٧
List of figures	ix
List of tables	хi
Chapter 1	
Introduction	
1.1 Background and importance	1
1.2 Viscoelastic materials and modeling techniques	3
1.3 Internal damping, its models and significance in rotor dynamics	6
1.4 Application of viscoelastic material in rotor-shaft systems	8
1.5 The present work	10
1.6 Layout of this work	13
Chapter 2	
Extraction of model parameters	
2.1 Introduction	15
2.2 Extraction of model parameters from hysteresis	16
2.3 Extraction of ATF parameters from ADF parameters	18
2.4 Extraction of model parameters from complex modulus	20

Cha	pter	3
-----	------	---

Dynamics of viscoelastic beams and rotors	
3.1 Introduction	31
3.2 Constitutive relations	32
3.3 Modelling of viscoelastic beam	33
3.3.1 Beam made of several viscoelastic layers	36
3.3.2 Finite element formulation	37
3.3.3 Modal damping ratio	39
3.3.4 Modal damping ratio of multiple viscoelastic layers	41
3.3.5 Forced response of a beam	43
3.4 Modelling of a viscoelastic rotor using beam finite element	44
3.4.1 Effect of axial load and axial torque	45
3.4.2 Effect of rotor-spin	45
3.4.2.1 Gyroscopic effect	45
3.4.2.2 Effect of internal material damping	46
3.4.3 Stability limit of the spin speed and synchronous unbalance response amp	litude
of the disc	49
3.4.4 Non-dimensionalisation	50
3.5 Validation of the finite element code	51
3.5.1 Axial vibration of rod	51
3.5.2 Transverse vibration of beam	53
3.5.3 Mass unbalance response of rotor	54
3.6 Results and discussion	55
3.6.1 Forced response of a viscoelastic beam	55
3.6.2 FRF and modal damping ratio	56
3.6.3 Beam made of several viscoelastic layers	58
3.6.3.1 Modal damping ratio	59
3.6.3.2 Forced response due to harmonic excitation	60
3.6.4 The rotor-shaft system	62
3.6.4.1 Stability limit of the spin speed	63
3.6.4.1.1 Instability due to length	67
3.6.4.2 Synchronous unbalance response amplitude of the disc	68
3.6.4.2.1 Effect of axial torque	70
3.6.4.3 Ananlysis of vibration response of a composite rotor	70
3.6.4.3.1 Composite rotor-shaft made of unidirectional fibre	71
3.6.4.3.2 Composite rotor-shaft made of two viscoelastic layers	72

Dynamics of Polymer and Polymer Nanocomposite rotor-shaft system 4.1 Introduction 75 4.2 Constitutive relations and equations of motions of beam 76 4.2.1 Equations of motion by using single ATF or ADF model 77 4.2.2 Equations of motion by using multiple ATF or ADF approaches 80 4.3 Modelling of viscoelastic rotors using beam finite element 81 4.3.1 Finite element modelling of Euler-Bernoullie viscoelastic beam 82 4.3.2 The effects of rotary inertia and gyroscopic action 84 4.3.3 Effect of axial load and axial torque 85 4.3.4 Effect of internal damping due to rotor spin 85 4.4 Equations of motion for multi-element spring-dashpot model of the rotor-shaft material 88 4.5 Polymer nanocomposite 93 4.5.1 Voigt-Reuss model 93 4.5.2 Cox model 94 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc 95 4.7 Results and discussion
4.1 Introduction 75 4.2 Constitutive relations and equations of motions of beam 76 4.2.1 Equations of motion by using single ATF or ADF model 77 4.2.2 Equations of motion by using multiple ATF or ADF approaches 80 4.3 Modelling of viscoelastic rotors using beam finite element 81 4.3.1 Finite element modelling of Euler-Bernoullie viscoelastic beam 82 4.3.2 The effects of rotary inertia and gyroscopic action 84 4.3.3 Effect of axial load and axial torque 85 4.3.4 Effect of internal damping due to rotor spin 85 4.4 Equations of motion for multi-element spring-dashpot model of the rotor-shaft material 88 4.5 Polymer nanocomposite 93 4.5.1 Voigt-Reuss model 93 4.5.2 Cox model 94 4.5.2 Halpin-Tsai model 94 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc 95
4.2.1 Equations of motion by using single ATF or ADF model 4.2.2 Equations of motion by using multiple ATF or ADF approaches 80 4.3 Modelling of viscoelastic rotors using beam finite element' 81 4.3.1 Finite element modelling of Euler-Bernoullie viscoelastic beam 82 4.3.2 The effects of rotary inertia and gyroscopic action 84 4.3.3 Effect of axial load and axial torque 85 4.3.4 Effect of internal damping due to rotor spin 85 4.4 Equations of motion for multi-element spring-dashpot model of the rotor-shaft material 88 4.5 Polymer nanocomposite 93 4.5.1 Voigt-Reuss model 94 4.5.2 Halpin-Tsai model 94 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc
4.2.1 Equations of motion by using single ATF or ADF model 4.2.2 Equations of motion by using multiple ATF or ADF approaches 80 4.3 Modelling of viscoelastic rotors using beam finite element' 81 4.3.1 Finite element modelling of Euler-Bernoullie viscoelastic beam 82 4.3.2 The effects of rotary inertia and gyroscopic action 84 4.3.3 Effect of axial load and axial torque 85 4.3.4 Effect of internal damping due to rotor spin 85 4.4 Equations of motion for multi-element spring-dashpot model of the rotor-shaft material 88 4.5 Polymer nanocomposite 93 4.5.1 Voigt-Reuss model 94 4.5.2 Halpin-Tsai model 94 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc
4.3 Modelling of viscoelastic rotors using beam finite element (a) 4.3.1 Finite element modelling of Euler-Bernoullie viscoelastic beam (b) 4.3.2 The effects of rotary inertia and gyroscopic action (b) 4.3.3 Effect of axial load and axial torque (b) 4.3.4 Effect of internal damping due to rotor spin (b) 4.4 Equations of motion for multi-element spring-dashpot model of the rotor-shaft material (b) 4.5 Polymer nanocomposite (c) 4.5.1 Voigt-Reuss model (c) 4.5.2 Cox model (c) 4.5.2 Halpin-Tsai model (c) 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc (c) 4.5 polymer response amplitude (c) 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude (c) 4.6 stability limit of the spin speed and synchronous unbalance response amplitude (c) 4.5 polymer (c)
4.3 Modelling of viscoelastic rotors using beam finite element (a) 4.3.1 Finite element modelling of Euler-Bernoullie viscoelastic beam (b) 4.3.2 The effects of rotary inertia and gyroscopic action (b) 4.3.3 Effect of axial load and axial torque (b) 4.3.4 Effect of internal damping due to rotor spin (b) 4.4 Equations of motion for multi-element spring-dashpot model of the rotor-shaft material (b) 4.5 Polymer nanocomposite (c) 4.5.1 Voigt-Reuss model (c) 4.5.2 Cox model (c) 4.5.2 Halpin-Tsai model (c) 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc (c) 4.5 polymer response amplitude (c) 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude (c) 4.6 stability limit of the spin speed and synchronous unbalance response amplitude (c) 4.5 polymer (c)
4.3.2 The effects of rotary inertia and gyroscopic action 4.3.3 Effect of axial load and axial torque 8.5 4.3.4 Effect of internal damping due to rotor spin 8.5 4.4 Equations of motion for multi-element spring-dashpot model of the rotor-shaft material 8.8 4.5 Polymer nanocomposite 9.3 4.5.1 Voigt-Reuss model 9.5.2 Cox model 9.5.2 Halpin-Tsai model 9.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc 9.5
4.3.2 The effects of rotary inertia and gyroscopic action 4.3.3 Effect of axial load and axial torque 8.5 4.3.4 Effect of internal damping due to rotor spin 8.5 4.4 Equations of motion for multi-element spring-dashpot model of the rotor-shaft material 8.8 4.5 Polymer nanocomposite 9.3 4.5.1 Voigt-Reuss model 9.5.2 Cox model 9.5.2 Halpin-Tsai model 9.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc 9.5
4.3.4 Effect of internal damping due to rotor spin 4.4 Equations of motion for multi-element spring-dashpot model of the rotor-shaft material 4.5 Polymer nanocomposite 4.5.1 Voigt-Reuss model 4.5.2 Cox model 4.5.2 Halpin-Tsai model 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc 95
4.4 Equations of motion for multi-element spring-dashpot model of the rotor-shaft material 4.5 Polymer nanocomposite 4.5.1 Voigt-Reuss model 4.5.2 Cox model 4.5.2 Halpin-Tsai model 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc 95
material 4.5 Polymer nanocomposite 93 4.5.1 Voigt-Reuss model 4.5.2 Cox model 4.5.2 Halpin-Tsai model 94 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc 95
material 4.5 Polymer nanocomposite 93 4.5.1 Voigt-Reuss model 4.5.2 Cox model 4.5.2 Halpin-Tsai model 94 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc 95
4.5.1 Voigt-Reuss model 4.5.2 Cox model 4.5.2 Halpin-Tsai model 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc 93 94 95
4.5.2 Cox model 4.5.2 Halpin-Tsai model 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc 94
4.5.2 Halpin-Tsai model 4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc 94
4.6 Stability limit of the spin speed and synchronous unbalance response amplitude of the disc 95
of the disc 95
4.7 Results and discussion
7.7 Results and discussion
4.7.1 The rotor-shaft system 97
4.7.2 Stability limit of the spin speed and synchronous unbalance response amplitude
at the disc of the pure PVC rotor 98
4.7.3 Dynamic characteristic of polymer nano-composite rotor-shaft system 101
Chapter 5
Conclusions and scope for future work
5.1 Conclusions
5.2 Scope for future work
Chapter 6
Bibliography 111
Appendix A
A.1 Finite element formulation of viscoelastic rod under axial vibration 119
A.2 Expression of complex modulus for various approaches 121
A.2.1 Multiple ATF or ADF approach 121
A.2.2 Multi-element (3 and 4-element) approach 123

Appendix B	
B.1 Element matrices	125
B.2 Internal damping matrix by using ATF or ADF approach	130
