Abstract	vii
Contents	viii-xi
Chapter 1: Introduction	1-22
1.1 Outline of the problem	1-12
1.1.1 The greenhouse to icehouse transition and marine $^{87}\text{Sr}/^{86}\text{Sr}$ ratio	4-7
1.1.2 Plateau uplift and initiation/intensification of South Asian Monsoon System	7-8
1.1.3 Tectonic forcing or climate forcing – a chicken-egg debate	9-10
1.1.4 An appraisal of the stable isotope systematics of Himalayan foreland sediments	10-12
1.2 Review of the sedimentology of the Palaeogene Himalayan foreland sediments	12-17
1.2.1 Litho-tectonic setup of the Himalayan mountain chain and occurrence of Palaeogene foreland sediments	12-14
1.2.2 Distribution, sedimentology, and depositional age of the Palaeogene foreland sediments in the Indian Himalaya	14-17
1.3 Review of the chronology of Himalayan foreland sediments and span of unconformity between marine and continental deposits	17-19
1.4 Brief geology of the Subathu sub-Basin	20
1.5 Purpose of the present study	21-22
Chapter 2: Study Area and Methodology	23-38
2.1 Study Area	23
2.2 Mapping and preparation of lithologs	23-24
2.3 Sequence stratigraphic analysis	25
2.4 Sampling	25
2.5 Petrographic study using thin section and Scanning Electron Microscope (SEM)	25-26
2.6 Measurement of major and trace element compositions of bulk sedimentary rocks	26
2.7 Measurement of Sr and Nd isotopic compositions of bulk sedimentary rocks	26

2.8 Measurement of oxygen ($\delta^{18}\text{O}$) and carbon ($\delta^{13}\text{C}$) isotopic compositions of sedimentary carbonate, organic matter and bio-apatite	27-38
2.8.1 $\delta^{18}\text{O}$ and $\delta^{13}\text{C}$ analysis of carbonates	28-32
2.8.1.1 Calibration of Gas-Bench for $\delta^{18}\text{O}$ and $\delta^{13}\text{C}$ analysis	29-31
2.8.1.2 Long term reproducibility of $\delta^{18}\text{O}$ and $\delta^{13}\text{C}$ values of internal laboratory standard BDH	31-32
2.8.2 $\delta^{13}\text{C}$ analysis of organic matter	32-34
2.8.3 $\delta^{18}\text{O}$ analysis of fossil tooth enamel phosphate (bio-apatite)	34-37
2.8.4 Analysis of micro-quantities of carbonates in sedimentary rocks	38
Chapter 3: Marine to Continental Transition in Himalayan Foreland	39-76
3.1 Introduction	39
3.2 Results	39-65
3.2.1 Lithofacies and inferred processes	39-43
3.2.2 Facies associations and depositional environments	44-52
3.2.2.1 FA1: Shelf	44-45
3.2.2.2 FA2: Mixed deltaic lobe	45-49
3.2.2.3 FA3: Shoreface	49-51
3.2.2.4 FA4: Subaerial alluvial plain	52
3.2.3 Fossil assemblages in marine Subathu Formation and their significance	52-53
3.2.4 Sandstone petrography	53-55
3.2.5 Sediment geochemistry	55-57
3.2.6 Carbon Isotopic signature	57-58
3.2.7 Sequence stratigraphy	58-65
3.3 Discussion	65-68
3.3.1 Evolution of foreland sedimentation in Subathu sub-Basin	65-66
3.3.2 Forced regression and provenance switch-over	66-68
3.4 Implications	68-74
3.4.1 Status of unconformity between marine and continental beds	68-70
3.4.2 Early Himalayan tectonics	70-74
3.5 Summary	75-76
Chapter 4: Fluvial Sequence Stratigraphy in the Foreland: Implications to Basin Dynamics vis-à-vis Himalayan Orogeny and Climate Change	77-108
4.1 Introduction	77
4.2 Results	77-96
4.2.1 Facies and architectural element	77-93
4.2.1.1 Channel fill elements (CH)	81-87

4.2.1.2 Sandy bedform elements (SB)	87-88
4.2.1.3 Downstream accretion (DA) and lateral accretion (LA) elements	88-90
4.2.1.4 Crevasse splay elements (CS)	90-91
4.2.1.5 Aggradational (FFa) and Degradational (FFd) floodplain elements	91-93
4.2.2 Floodplain carbonates and profile developments	93-96
4.3 Discussion	96-104
4.3.1 Sequence stratigraphy and fluvial style	96-101
4.3.1.1 Low accommodation valley fills associated with forced regression	96-97
4.3.1.2 High accommodation meandering	97
4.3.1.3 High accommodation braided	97-98
4.3.2 Tectonic versus climate control on temporal variation in fluvial style	101-104
4.4 Implications to the early Himalayan tectonics and enigma of missing flysch deposits in foreland	104-106
4.5 Summary	107-108
Chapter 5: Oxygen and Carbon Isotope Studies of Soil Carbonates from Foreland Molasse and Assessment of Burial Diagenetic Effect	109-126
5.1 Introduction	109-111
5.2 Results	111-115
5.2.1 Stable isotopic composition of carbonates	113-114
5.3 Discussion	115-125
5.3.1 $\delta^{18}\text{O}$ composition of soil carbonates and diagenesis	115-118
5.3.2 Assessment of sampling bias and modeling diagenetic overprinting of pedogenic carbonates	118-125
5.4 Summary	125-126
Chapter 6: Tectonic-Climate Connection: Palaeo-altitude of Tibetan Plateau and onset of South Asian Monsoon	127-146
6.1 Introduction	127
6.2 Results	127-129
6.3 Discussion	130-145
6.3.1 Assessing the change in precipitation amount during the Palaeogene and retrieving the antiquity of Indian monsoon	130-135
6.3.2 Palaeo-altitude of the Tibetan Plateau	135-141
6.3.3 Beyond tectonics-climate (monsoon) connection: exploring other driving force	141-145

6.4 Summary	145-146
Chapter 7: Conclusions and Future Scope of Study	147-150
7.1 Conclusions	147-149
7.2 Future Scope of Study	149-150
References	151-174
Appendix A: Global Positioning System (GPS) coordinates of the field photographs	175
Appendix B: Modal data for Subathu, Dagshai and White Sandstone unit	176
Appendix C: Bulk organic matter carbon isotopic ($\delta^{13}\text{C}$) compositions of Subathu and Dagshai Formation samples	177
Appendix D: Detailed description of clastic Facies studied in present work	178-181
Appendix E: Detailed descriptions of floodplain carbonate types	182-185
Appendix F: Stable carbon ($\delta^{13}\text{C}$) and oxygen ($\delta^{18}\text{O}$) isotopic compositions of all floodplain, vein, and cement carbonates	186-192
Appendix G: Micro-domain carbonate concentration (%) in selected floodplain carbonates	193
Curriculum Vitae	195
