List of abbreviations	xiii
Abstract	xv
Contents	xvi
Chapter 1: Introduction and Review of Literature	1
1.1 2,4-DCP: A potent xenobiotic in its class	2
1.2 Degradation of 2,4-DCP	4
1.3 The alternative strategies	5
1.4 Role of laccase in bioremediation	6
1.5 Optimization of laccase production	8
1.5.1 Media manipulation for increasing the laccase yield	9
1.5.2 Use of molecular biology for the improvement of laccase	10
1.6 Types of fermentation used in laccase production	11
1.6.1 Solid State Fermentation	12
1.6.1.1 Important aspects of SSF	14
1.6.1.2 Challenges and advantages of SSF	15
1.6.2 Submerged Fermentation	16
1.7 Characterization of laccases	22
1.8 Immobilization studies	25
1.9 Statistical optimization approaches	26
1.10 Identification of the research problem	28
1.11 Objectives of the present work	29
Chapter 2: Materials and Methods	30
2.1 Substrates	30
2.2 Microorganism	30
2.3 Equipment	31
2.4 Chemicals	32
2.5 Methods	33
2.5.1 Biodegradation conditions	33
2.5.2 Media preparation	33
2.5.2.1 Potato Dextrose Agar	33
2.5.2.2 Fermentation Medium for laccase production	34
2.5.2.3 Culture conditions for laccase production	34

2.5.2.4 Inoculum preparation	34
2.5.3 Method of sterilization	34
2.5.4 Fermentation process	34
2.5.5 Extraction procedure	35
2.5.6 Laccase assay	35
2.5.7 Estimation of protein by Lowry's method	35
2.5.8 Determination of specific activity	36
2.5.9 Ammonium sulphate precipitation	36
2.5.10 Dialysis of ammonium sulphate precipitated enzyme	37
2.5.11 Isoelectric focusing	37
2.5.12 Molecular mass determination and assertion of purity using HPLC	37
2.5.13 Molecular mass determination and assertion of purity using SDS-PAGE	38
2.5.14 Measurement of 2,4-DCP degradation	40
2.5.15 Quantification of 2,4-DCP degradation using HPLC	40
2.5.16 Quantification of 2,4-DCP degradation using spectrophotometer	40
2.5.17 Determination of low molecular weight acids	40
2.5.18 Determination of intermediates	41
2.5.19 Effect of additional metal ions on biodegradation of 2,4-DCP	41
2.5.20 Effect of temperature	41
2.5.21 Immobilization of laccase	41
2.5.22 Determination of activity of each bead	41
2.5.23 Response Surface Methodology	42
2.5.22 Genetic Algorithm	42
2.6 Softwares	43
Chapter 3: Optimization of laccase production	44
3.1 Selection of production parameters for laccase	45
3.1.1 Selection of different lignocellulosics	45
3.1.2 Particle size	46
3.1.3 Moisture content	47
3.1.4 Inoculum volume	48
3.1.5 Effect of pH	49
3.1.6 Effect of temperature	50
3.1.7 Effect of surfactants	51
3.1.8 Incubation time	52
3.1.9 Additional carbon source	53
3.1.10 Effect of different inoculum	54
3.2 Optimization of laccase production	55
3.3 Optimization of laccase production using GA	60
3.3.1 Genes and chromosomes	61
3.3.2 Fitness function	61
3.3.3 Creation function	61

3.3.4 Selection	61
3.3.5 Crossover and Mutation	61
3.3.6 Adequacy of the model	63
3.4 Discussion	63
Chapter 4: Purification and Characterization	71
4.1 Strategy adapted for laccase purification	72
4.2 Precipitation	73
4.3 Isoelectric focusing of laccase	74
4.4 HPLC for assertion of purity	75
4.5 SDS-PAGE for assertion of purity	77
4.6 Absorption spectra of laccase	78
4.7 pH stability of laccase isozymes	79
4.8 Temperature stability of laccase isozymes	80
4.9 Effect of additional Cu <sup>2+</sup> on the activity of the laccase isozyme	80
4.10 Discussion	80
Chapter 5: Degradation of 2,4-DCP using laccase	
5.1 Effect of different environmental parameters on the biodegradation of 2,4- DCP	85
5.1.1 Effect of metal ions	86
5.1.2 Effect of pH	87
5.1.3 Effect of temperature	88
5.1.4 Effect of initial enzyme concentration	88
5.1.6 Effect of salt concentration on enzyme activity	89
5.2 Optimization of the biodegradation of 2,4-DCP	90
5.2.1 Design of Experiments	91
5.2.2 Regression equation	92
5.2.3 Optimization using GA	97
5.2.3.1 Genes and Chromosomes	98
5.2.3.2 Fitness function	98
5.2.3.3 Selection	98
5.2.3.4 Crossover and Mutation	99
5.3 Adequacy of the model	100
5.4 Kinetics of laccase mediated degradation of 2,4-DCP	101
5.5 Identification of the degradation products	103
5.6 Discussion	106
Chapter 6: Immobilization of laccase	108
6.1 Selection of parameters for immobilization	109
6.1.1 Effect of alginate concentration	109
6.1.2 Effect of acrylamide concentration	110
6.1.3 Effect of CuCl <sub>2</sub> concentration	111
6.1.4 Effect of needle size	112
6.1.5 Effect of hardening time	112
6.2 Optimization of laccase immobilization	113

6.2.1 Design of experiments	113
6.2.2 Optimization using Genetic algorithm	118
6.2.2.1 Genes and Chromosomes	120
6.2.2.2 Fitness function	120
6.2.2.3 Creation function	120
6.2.2.4 Selection	120
6.2.2.5 Crossover and Mutation	121
6.2.3 Validation of the model	121
6.3 Kinetics of immobilized laccase	122
6.4 Calculation and distribution of the enzyme in each bead	123
6.5 Effect of various environmental parameters	124
6.5.1 pH stability	124
6.5.2 Temperature stability	125
6.6 Number of recycles	125
6.7 Discussion	126
Chapter 7 Conclusion	129
