Abstract		xxii
Contents		xxiii
1	Introduction	1
1.1	Introduction to Mobile Robots	1
1.1.1	Introduction to Multi-Legged Locomotion	2
1.1.2	Gait Planning of Six-legged Robots	3
1.2	Literature Survey	5
1.2.1	Straight-forward Walking Gait	5
1.2.2	Crab Walking Gait	12
1.2.3	Turning Motion Gait	13
1.2.4	Soft Computing-based Approaches	14
1.3	Gaps in the Literature	15

1.4	Aims and Objective	15
1.5	Contributions Made by the Scholar	16
1.6	Layout of the Thesis	17
1.7	Summary	17
2	Straight-forward and Crab Gaits Planning of Six-legged Robot	18
2.1	Description of the Problem	18
2.1.1	Gait Terminologies and Their Relationships	19
2.1.2	Steps involved in Proposed Methodology	21
2.2	Mathematical Formulation of the Problem	21
2.2.1	Kinematic Modeling of Six-legged Robot	22
2.2.2	Gait and Foot Trajectory Planning	25
2.2.3	Dynamic Modeling of Six-legged Robot	28
2.2.4	Energy Consumption Analysis	33
2.2.5	Determination of Stability Margin	36
2.3	Results and Discussion	37
2.3.1	Straight-forward Walking	37
2.3.2	Crab Walking	57
2.4	Summary	70
3	Turning Gait Planning of Six-legged Robot	72
3.1	Description of the Problem	72
3.1.1	Terminologies Related to Turning Gaits	73
3.2	Mathematical Formulation of the Problem	74
3.2.1	Kinematic Model of the Robot during Turning	74
3.2.2	Dynamic Model of the Robot during Turning	77
3.2.3	Energy Consumption of a Six-legged Robot	79
3.3	Results and Discussion	80
3.4	Summary	93
4	Introduction to the Soft Computing Tools and Techniques	94
4.1	Introduction to Soft Computing	94
4.2	Introduction to Genetic Algorithms	95

4.2.1	Binary-coded Genetic Algorithm	96
4.3	Introduction to Artificial Neural Networks	99
4.3.1	Working Principle of a Feed-Forward Neural Network	101
4.3.2	Training of Neural Networks using Back-propagation Algorithm	103
4.4	Introduction to Fuzzy Sets and Fuzzy Reasoning	104
4.5	Adaptive Neuro-Fuzzy Inference System (ANFIS)	107
4.6	Summary	109
5	Soft Computing-based Models for Straight-forward and Crab Gaits Planning	110
5.1	Description of the Problem	110
5.2	Design of Soft Computing-based Model for Straight-forward Motion	111
5.3	Results and Discussion (Straight-forward Gait Planning)	118
5.4	Design of Soft Computing-based Model for Crab Motion	129
5.5	Results and Discussion (Crab Gait Planning)	130
5.6	Summary	135
6	Soft Computing-based Models for Turning Gait Planning	136
6.1	Description of the Problem	136
6.2	Design of Soft Computing-based Model for Turning Motion	136
6.3	Results and Discussion	142
6.4	Summary	148
7	Concluding Remarks and Scope for Future Work	149
7.1	Concluding Remarks	149
7.2	Scope for Future Work	152
	References	154
	Appendix A: Inverse Dynamics of Swing Legs	163
	Appendix B: Variations of Different Components of Torque during Swing Phase	168
	Appendix C: Energy Consumption during Descending Motion	171
	Appendix D: Optimized Consequent Parameters of the Fuzzy Systems	173
	Curriculum Vitae	179
