Abstract xxix

Chapter 1: Introduction 1
1.1. Understanding natural circulation 1
1.2. NCL in nuclear applications 3
1.3. Different configurations of NCL 4
1.4. Brief overview of available literature 6
1.4.1. Concept of natural circulation and flow instability 7
1.4.2. Natural circulation in solar thermal systems 10
1.4.3. Investigations on Toroidal NCLs 11
1.4.4. Transformation towards rectangular geometry 14
1.4.5. Stability issues related to rectangular NCL 19
1.4.6. Studies on different alternative loop configurations 23
1.4.7. Instability in two-phase NCLs 26
1.4.8. Entrainment in two-phase NCLs with phase separation 30
1.5. Motivation of the present thesis 32
1.6. Organization of the thesis 34

Chapter 2: Generalized Analysis of Single-phase Natural Circulation Loop 37
2.1. Background with Single-phase NCLs 37
2.2. Development of generalized model 39
2.2.1. Physical description and simplifying assumptions 39
2.2.2. Governing equations 40
2.2.3. Non-dimensionalization of governing equations 41
2.2.4. Steady-state solutions 43
2.2.5. Numerical solution procedure 52
2.2.6. Transient analysis 53
2.2.7. Thermodynamic property estimation 54
2.3. Some thoughts on different selections 54
2.3.1. Choice of reference temperature (T_0) 55
2.3.2. Estimation of average thermal expansion coefficient (β_{av}) 55
2.3.3. Selection of friction factor (f_{av}) correlations 56
2.3.4. Selection of heat transfer relations 56
2.3.5. Influence of vertical length scale (L_v) 58
2.4. Model validation with experimental results 58

Copyright IIT Kharagpur

2.5. Transient response of rectangular NCL 61
2.6. Comparison of rectangular and toroidal geometries 66
2.7. Epilogue 71

Chapter 3: Stability Control and Dynamic Performance of a Single-phase Rectangular NCL 73
3.1. Preamble 73
3.2. Effect of Geometric Parameters 75
3.2.1. Effect of inner diameter (d_i) 76
3.2.2. Effect of loop height (L_v) 78
3.2.3. Effect of heater length (L_h) 80
3.2.4. Effect of the length of insulated horizontal section 81
3.2.5. A general stability relation 81
3.3. Influence of Additional Resistances 82
3.4. Influence of Loop Inclination 84
3.5. Dynamic Performance of NCL 87
3.6. Epilogue 92

Chapter 4: Analysis of Single-phase Rectangular NCL as a Conjugate Problem with Ambient Heat Leakage 95
4.1. Requirement of quantitative prediction 95
4.2. Mathematical modeling 97
4.2.1. Governing equations 98
4.2.2. Non-dimensionalization of governing equations 100
4.2.3. Heat transfer and friction factor relations 101
4.2.4. Solution procedure 102
4.3. Results and discussion 103
4.3.1. Model validation with experimental data 103
4.3.2. General temperature profiles 103
4.3.3. Effect of ambient 105
4.3.4. Effect of inner diameter (d_i) 111
4.3.5. Effect of loop height (L_v) 114
4.3.6. Effect of horizontal length 118
4.3.7. Effect of heater length (L_h) 120
4.3.8. Effect of wall thickness $((d_o - d_i)/2)$ 123
4.3.9. Effect of coolant parameters 124
4.3.10. Effect of wall insulation 126
4.4. Epilogue 128

Chapter 5: Analysis of Two-phase Rectangular NCL with Thermodynamic Non-equilibrium 131
5.1. Preamble 131
5.2. Modelling of subcooled boiling 132
5.3. Theoretical formulation 135
5.3.1. Modelling assumptions 135
5.3.2. Boiler section 136
5.3.2.1. Single-phase liquid region 136
5.3.2.2. Subcooled boiling region 136
5.3.2.3. Saturated boiling region 138
5.3.3. Riser section 138

Copyright IIT Kharagpur

5.3.4. Condenser section 139
5.3.5. Pressure drop around the loop 140
5.4. Results and discussion 140
5.4.1. Typical loop flow rate characteristics 141
5.4.2. Comparison with boiling channel data 146
5.4.3. Generalized working regime map 146
5.4.4. Influence of sink condition 150
5.4.5. Influence of loop height 155
5.4.6. Influence of loop diameter 157
5.4.7. Influence of the length of heat-exchanging sections 158
5.5. Epilogue 160

Chapter 6: Experimental Investigations of Carryover and Carryunder Phenomena in a Simulated AHWR Loop 163
6.1. Preamble 163
6.2. Design of experimental facility 164
6.2.1. Important design decisions 165
6.2.2. Scale-down analysis of NCL 165
6.2.3. Entrainment analysis 169
6.2.4. Annular flow at riser outlet 170
6.3. Details of experimental facility 171
6.4. Experimental observations 174
6.4.1. Probe signal analysis 175
6.4.2. Natural circulation behaviour 178
6.4.3. Carryover measurement 179
6.4.4. Use of screens to suppress carryover 183
6.4.5. Carryunder identification 189
6.5. Epilogue 190

Chapter 7: Conclusions and Scope for Future Study 193
7.1. Conclusions 193
7.1.1. Unified model for single-phase NCLs 193
7.1.2. Stability control for single-phase NCLs 194
7.1.3. Rectangular NCL with heat leakage to the ambient 195
7.1.4. Two-phase NCL with thermal non-equilibrium 196
7.1.5. Experimental investigations of carryover and carryunder 197
7.2. Scope for future study 198
