	Page No.
CHAPTER I	GENERAL INTRODUCTION
1.1	Introduction 1
1.2	The role of redundancy in reliability improvement 2
1.3	The problem of reliability optimization through the use of active parallel redundancy 5
1.4	Review of previous work 6
1.5	Scope of the present study 25
1.6	Investigations reported in the present thesis 26
CHAPTER II	SOME GENERAL SYSTEM MODELS
2.1	Introduction 31
2.2	Systems with redundancy viewed as a 'multivariate birth process' 32
2.3	The system model : the most general case 36
2.4	Systems composed of independent subsystems 42
2.5	Some examples of state dependent systems 53
CHAPTER III	LIFE CHARACTERISTICS OF PARALLEL SYSTEMS WITH STATE DEPENDENT COMPONENTS
3.1	Introduction 56
3.2	Suitable forms for state dependent density function (2.4.17) 57
3.2.1	The exponential model 59
3.2.2	The <u>weibull</u> model 62
3.2.3	The modified extreme value model 67
3.2.4	The case of identical components 68

3.3	System models generated by different forms of $\alpha_j^{(m_j)}$	70
3.3.1	Desirable properties of $\alpha_j^{(m_j)}$	71
3.3.2	Models considered by previous investigators	72
3.3.3	Some possible modifications of the existing models	78
3.3.4	The proposed model	79
	Appendix A-1	82
	Appendix A-2	88
CHAPTER IV	SOLUTION OF REDUNDANCY OPTIMIZATION PROBLEMS THROUGH THE USE OF EXACT METHODS	
4.1	Introduction	90
4.2	The problem formulation	91
4.3	Use of dynamic programming technique	93
4.4	The search technique of Geoffrion	97
4.5	The search technique of Lawler and Bell	106
4.6	Conclusions	120
4.7	Computational experience	120
	Appendix-B	121
CHAPTER V	USE OF HEURISTICS IN SOLVING THE OPTIMAL REDUNDANCY ALLOCATION PROBLEMS	
5.1	Introduction	127
5.2	Application of the heuristic of Gopal et al.	129
5.3	A new heuristic	132
	CONCLUDING REMARKS	143
	SYNOPSIS	145
	BIBLIOGRAPHY	151
