1 Introduction **1**

1.1 Literature Survey and Motivation . . . 3

1.1.1 Analog Performance Modeling . . . 4

1.1.2 Generation/Selection of an Optimal System Topology . . . 5

1.1.3 High-Level Specification Translation . . . 7

1.2 Overview and Contributions of the Thesis . . . 8

1.2.1 Problem Definition . . . 8

1.2.2 Generation of High-Level Performance Models . . . 8

1.2.3 Top-Down Methodology for Generation of an Optimal Topology for Linear Analog Systems . . . 9

1.2.4 High-Level Specification Translation . . . 11

1.2.5 Contributions . . . 12

1.3 Organization of the rest of the Thesis . . . 12

2 Optimization-based Analog High-Level Design Methodology **15**

2.1 Generic Methodology . . . 16

2.1.1 Simulation-based Approach . . . 16

2.1.2 Equation-based Approach . . . 18

2.2 High-Level Model Generation . . . 19

2.2.1 Behavioral Model Generation . . . 19

2.2.1.1 Analytical Techniques . . . 20

2.2.1.2 Fitting or Regression Methods . . . 22

2.2.1.3 Symbolic Model Generation Methods . . . 23

2.2.1.4 Model Order Reduction Methods . . . 24

2.2.2 Performance Estimation Model Generation . . . 24

2.2.2.1 Bottom-Up Approach . . . 24

2.2.2.2 Top-Down Approach . . . 25
2.2.3 Feasibility Model Generation . . . 26
2.3 Optimization Methods . . . 26
2.3.1 Deterministic Methods . . . 27
2.3.2 Stochastic Methods . . . 27
2.3.3 Multi-Objective Optimization Method . . . 28
2.4 Topology Generation/Selection Methods . . . 30
2.4.1 Selection before or after sizing . . . 30
2.4.2 Selection during sizing . . . 31
2.4.3 Top-Down Generation . . . 31
2.5 Summary . . . 32

3 Generation of High-Level Performance Estimation Models 33
3.1 High-Level Performance Estimation Models . . . 33
3.2 Regression-based Model Generation . . . 35
3.2.1 Sample Space and Design of Experiments . . . 35
3.2.2 Training Data Generation and Scaling . . . 37
3.2.3 Regression Using LS-SVM . . . 40
3.2.3.1 Selection of Hyper parameters . . . 41
3.2.4 Quality Measures . . . 45
3.3 Comparison with Existing Methodologies . . . 45
3.4 Topology Sizing Methodology using GA . . . 47
3.5 Experimental Results . . . 47
3.5.1 Experiment 1 . . . 49
3.5.2 Experiment 2 . . . 53
3.5.3 Experiment 3 . . . 53
3.6 Conclusion . . . 60

4 Top-Down Generation of an Optimal Topology 63
4.1 Top-Down Topology Generation Methodology . . . 64
4.1.1 Outline of the Methodology . . . 64
4.1.2 Transfer Function and State Space Representation . . . 66
4.1.3 Topology Generation . . . 68
4.1.3.1 Functional Topology Generation . . . 68
4.1.3.2 Component-Level Topology Generation . . . 69

4.1.4 Topology Transformation 71
4.1.5 Performance Estimation 76
4.1.5.1 Sensitivity minimization 76
4.1.5.2 Hardware Complexity 79
4.1.5.3 Relative Power Consumption 80
4.1.6 Topology Exploration and Selection 81
4.1.6.1 Feasible Gm Value Constraints 81
4.1.6.2 Non-overload Constraints 82
4.1.7 Complete Flow of the Topology Generation Process for CT $\Sigma\Delta$ Modulator System 82
4.1.7.1 Related Work on $\Sigma\Delta$ Modulator Synthesis 83
4.1.7.2 Methodology 85
4.2 Comparison with Existing Methodologies 85
4.3 Experimental Results 87
4.3.1 Experiment 1 87
4.3.2 Experiment 2 92
4.3.3 Experiment 3 95
4.4 Conclusion 100

5 High-Level Specification Translation 103
5.1 Problem Formulation 103
5.2 Feasible Design Space Construction 105
5.2.1 Application Bounded Space 105
5.2.2 Circuit Realizable Space 106
5.2.3 Feasible Design Space 107
5.3 Feasible Design Space Identification 108
5.3.1 Accuracy Measurement 108
5.4 Design Space Exploration 109
5.4.1 Cost Function Formulation 111
5.4.1.1 Primary Objectives 111
5.4.1.2 Secondary Objectives 111
5.4.2 Exploration Algorithm 112
5.5 Comparison with Existing Methodologies 112
5.6 Experimental Results 113
5.6.1 Experiment 1 113

Copyright IIT Kharagpur

5.6.2 Experiment 2 . . . 117
5.6.3 Experiment 3 . . . 119
5.7 Conclusion . . . 122

6 Conclusion and Directions for Further Research 125
6.1 Summary and Conclusions . . . 125
6.1.1 Contributions . . . 127
6.1.2 Tools developed . . . 128
6.2 Directions for Further Research . . . 129

A Least Squares Support Vector Machine 131
A.1 Least-Squares Support Vector Regression . . . 132
A.2 Least-Squares Support Vector Classification . . . 134

B Global Optimization Techniques 137
B.1 Genetic Algorithm . . . 137
B.2 Simulated Annealing . . . 140
