SYNOPSIS	1	
INTRODUCTION	1	
Chapters		
I. VARIATIONAL PRINCIPLES FOR THE UNSTEADY HEAT CONVECTION	22	
1. Introduction 2. Basic thermodynamic relations 3. The variational principle 4. Lagrangian formulation 5. Surface heat transfer effect 6. Systems with temperature dependent parameters.		
II. VARIATIONAL PRINCIPLES FOR THE STEADY HEAT TRANSFER IN DUCTS	47	
1. Introduction 2. The variational principle 3. Lagrangian formulation and generalized coordinates 4. Surface heat transfer effect 5. Nonlinear systems with temperature dependent parameters.		
III. APPLICATION OF THE VARIATIONAL PRINCIPLE TO THE PROBLEMS OF STEADY HEAT TRANSFER IN DUCTS	63	
1. Introduction 2. Illustrative examples (A) Heat transfer between parallel plates for parabolic flow (B) Procedure for the estimation of the Nusselt number of infinity without detailed calculations of the temperature distribution (C) Slug flow between parallel plates 3(A) Parabolic flow in a tube of circular section (B) Slug flow in a tube.		
IV. A VARIATIONAL METHOD FOR COMBINED FREE AND FORCED CONVECTION IN CHANNELS	89	
1. Introduction 2. The momentum and energy equations 3. The mean mixed temperature and the Nusselt number 4. The variational procedure 5. Application to the rectangular duct.		

V. HEAT TRANSFER IN LAMINAR FLOW BETWEEN PARALLEL PLATES AT SMALL PÉCLÉT NUMBERS	107
--	-----

1. Introduction
2. Formulation of the problem
3. Mathematical solution
4. The mean mixed temperature and Nusselt numbers
5. Comparison and discussion of the results.
