List of Notation and Abbreviations	(xi)
Abstract	(xii)
Contents	(xiii)
Chapter 1 Introduction	1 - 29
1.1 Background	1
1.2 Graph Theory: A Tool for Network Reliability Evaluation	2
1.2.1 Undirected Networks	4
1.2.2 Directed Networks	4
1.2.3 Mixed Networks	6
1.3 Major Assumptions	7
1.4 Approaches for Network Reliability Evaluation	7
1.4.1 Pathset and Cutset (POC) Approaches	8
1.4.1.1 Inclusion Exclusion/ Sum of Disjoint Product Method	10
1.4.1.2 Calculation of Bounds Method	11
1.4.1.3 Monte Carlo Simulation Method	12
1.4.1.4 Domination Theory	12
1.4.2 Non-Pathset or Cutset (NPOC) Approaches	13
1.4.2.1 State Enumeration Method	13
1.4.2.2 Factoring Theorem (Reduction and Decomposition Techniques)	14
1.4.2.3 Probability Transformation Methods	14
1.4.2.4 Topological Methods	14
1.4.2.5 Binary Decision Diagram Methods	15
1.5 Literature Survey and Review	16

1.5.1	Survey on Network Reliability Measures and Evaluation Techniques	16
1.5.1.1	Pathset and Cutset Enumeration Techniques	16
1.5.1.2	2-Terminal Reliability Measures	18
1.5.1.3	Global Reliability Measures	20
1.5.1.4	k -Terminal Reliability Measures	21
1.5.1.5	Recent Approaches	21
1.5.2	Survey on Capacitated Reliability Evaluation Techniques	22
1.5.3	Survey on Network Topological Layout Design	24
1.6	Observations and Motivations	25
1.7	Research Objectives	27
1.8	Organization of the Thesis	27
Chapter 2	Global Reliability Evaluation for a Network	30 - 50
2.1	Introduction	30
2.2	Background of the Proposed Method	31
2.2.1	Network Representation	33
2.2.2	Testing Connectivity of a Specified Node Set	33
2.2.2.1	Node Fusion Technique	33
2.2.3	Generation of Node Set Combination from its Lower Order Node-Sets	36
2.2.4	Checking Validity of a Node Set	36
2.2.5	Formation of Cutset	37
2.3	Algorithm to Enumerate g -Minimal Cutsets	39
2.4	Illustration	40
2.5	g -Reliability: Comparisons of Experimental Results	45
2.6	Application: A Case Study to Real-Type of Large Size Unsaturated Water Distribution Networks	47
2.5	Summary	49
Chapter 3	A Unified Framework to Evaluate Network Reliability Measures	51 - 67
3.1	Introduction	51

3.1.1	Definitions	52
3.2	The Proposed Framework	52
3.2.1	Algorithm to Enumerate Minimal Cutsets for Network Reliability Measures	54
3.2.2	Illustration	55
3.2.3	Unreliability Expressions	58
3.2.3.1	g -Terminal Unreliability Expression	58
3.2.3.2	2-Terminal Reliability Expression	59
3.2.3.3	k -Terminal Reliability Expression	60
3.3	Experimental Results and Discussions	60
3.3.1	IIT Kharagpur LAN Network: A Case Study	62
3.3.3.1	k -Terminal and Global Reliability Evaluation for Hostel Area of IIT Kharagpur LAN	65
3.3.3.2	All Terminal Reliability Evaluation for Academic Area of LAN	67
3.2.3.3	All Terminal Reliability Evaluation for IIT Kharagpur LAN Network	67
3.4	Summary	67
Chapter 4	Pathset or Cutset: A comparative Study for Network Reliability Measures	68-80
4.1.	Introduction	68
4.2	The Modified Algorithm to Enumerate Minimal Cutsets for Directed Network Enumeration	70
4.3	Experimental Results of the Proposed Comparative Study	71
4.3.1	For 2-Terminal and g -terminal Reliability Measures	71
4.3.1.1	Directed Networks	71
4.3.1.2	Undirected Networks	75
4.3.2	For k -Terminal Reliability Measures	76
4.4	Observations and Suggested Guidelines	79
4.4.1	Directed Networks	79
4.4.2	Undirected Networks	79
4.5	Summary	80

Chapter 5	Reliability Evaluation of Capacitated Network Using Minimal Cutsets	81-102
5.1	Introduction	81
5.1.1	Definitions	83
5.2	Brief Description of the Proposed Algorithm	84
5.3	Development of Algorithm	84
5.3.1	Proposed Equations: The Idea	84
5.3.2	Is Cut itself a SCG or it Needs its Subsets Enumeration	86
5.3.3	What Initial Order	86
5.3.4	Efficient Enumeration of particular Order SCGs of a Minimal Cut	89
5.3.5	External or Both External/Internal Redundancy Removal	90
5.3.6	Internal Redundancy Removal	91
5.4	The Proposed Algorithm	92
5.5	A Complete Example	96
5.6	Experimental Results, Comparison and Discussion	97
5.6	Summary	102
Chapter 6	Optimal Design of Communication Network Layout	103-121
6.1	Introduction	103
6.2	The Problem Formulation	104
6.3	The Proposed Heuristic Optimization Approach	108
6.3.1	Assigning Objective and Fitness Function to a Solution	110
6.4	Stepwise Procedures of the Proposed Method	111
6.5	Illustration	113
6.5.1	Capacity Related Reliability Calculation	114
6.5.1.1	Initial Population	116
6.5.1.2	Crossover Operation	117
6.5.1.3	Reproduction Operation	117
6.5.1.4	Mutation Operation	119
6.5.2	Results and Discussion	119
6.6	Summary	121

Chapter 7	Conclusions and Future Work	122-126
7.1	Conclusions	122
7.2	Author's Contributions	124
7.2	Scope for Future Work	125
	Appendices	127-140
	Appendix – A	127
	Appendix – B	134
	References	141-152
	Publications from Present Study	153
