Preface.	B

PART I

Section A.

	CHAPTER 1:	Location of the area.	Page.
1.1	Introduction.	1
1.2	Physiography.	1
1.3	Climate and vegetation.	2
1.4	Previous literature.	2
1.5	Scope of the work.	4
1.6	Laboratory investigations.	6
1.7	Geology of the area.	9
	CHAPTER 2:	Structure.	
2.1	Introduction.	13
2.2	Evidences of isoclinal fold movements.	14
2.3	Structures in metamorphites.	14
2.4	Structures in basic and ultrabasic rocks.	15
2.5	Structures observed in dunite.	15
2.6	Cross joints in dunite.	17
2.7	Mechanism of intrusion.	18
2.8	Inter-relationship of deformation, intrusive activity and metamorphism.	19
	CHAPTER 3:	Petrography.	
3.1	Introduction.	21
3.2	Country rocks.	21
3.3	Basic igneous rocks.	29

				<u>Page.</u>
3.4	Pyroxenite.	34
3.5	Distinction between basic igneous rocks and metamorphites.	34
3.6	Dunite.	37
3.7	Peridotite.	38
3.8	Distinction between the two intrusive magmatic phases.	39
	CHAPTER 4: Mineralogy.			
4.1	Introduction	42
4.2	Granulites.	45
4.3	Gabbro.	50
4.4	Dunite and Peridotite.	56
4.5	Mineral paragenesis.	61
	CHAPTER 5: Petrochemistry and Petrogenesis.			
5.1	Introduction.	69
5.2	Method of recasting modal analysis to chemical analysis.	69
5.3	Chemical composition of gneissic rocks.	70
5.4	Chemical composition of granulites.	71
5.5	Chemical composition of gabbro.	71
5.6	Chemical composition of pyroxenite.	72
5.7	Chemical composition of dunite and peridotite.	72
5.8	Petrogenesis of dunite.	73
	<u>Section B.</u>			
	CHAPTER 6: Utilization of Trend surface analysis.			
6.1	Introduction.	74
6.2	Geologic system analysis.	74
6.3	Usage of polynomial functions.	76

6.4	Present manner of usage.	78
6.5	Set of assumptions for processing the data.	80
6.6	Procedure of computation.	83
6.7	Error measure computation.	85
6.8	Computer programme.	86
6.9	Question of trend terminology.	88
6.10	Description of computer programmes.	89
6.11	Geological literature on the usage of trend surface studies.	90
6.12	Conclusions.	93
	CHAPTER 7: Trend surface analysis of the specific gravity data from the northern main dunite belt and southern small dunite belt.	
7.1	Introduction.	94
7.2	Difficulties encountered while using specific gravity data.	95
7.3	Advantages in using trend surfaces of specific gravity.	97
7.4	Description of the specific gravity trend maps.	97
7.5	Residual maps.	103
7.6	Northern main dunite belt.	105
7.7	Trend surfaces of the subzones of the northern main dunite belt.	109
7.8	Comments on subzone C trend map.	110
7.9	Comparison of sub zone trend maps and the composite trend map.	113
7.10	Concluding remarks.	114

CHAPTER 8: Trend surface analysis utilizing
the specific gravity and mineralogic data of gabbroidal rocks.

8.1	Trend surface (specific gravity) maps of dunite and gabbro.	116
8.2	Application of trend surface analysis for study of mineral variation in pyroxenite and gabbros.	118
8.3	Trend and random variables.	119
8.4	Description of the trend surface maps of the minerals.	121
8.5	Residual maps.	124
8.6	Summary.	125

CHAPTER 9: Trend surface analysis utilizing
chemical components of gabbros.

9.1	Introduction.	127
9.2	Discussion on first generation and second generation characters.	128
9.3	Process of magmatic crystallization.	129
9.4	Linear trend maps.	131
9.5	Quadratic trend maps.	131
9.6	Cubic trend maps.	133
9.7	Fourth degree trend map.	133
9.8	Residual map.	133
9.9	Conclusions.	135

CHAPTER 10: Comparison of trend map and a
critical review of the numerical
methods employed.

10.1	Introduction.	137
10.2	Grid deviation map.	137
10.3	Comments on this procedure.	138
10.4	Profiles of grid deviation values.	140

				<u>Page.</u>
10.5	Moving average method.	140
10.6	Evaluation of strength of trend.	141
10.7	Sub-set trend map.	142
10.8	Results.	144
10.9	Conclusion.	145

Section C.

CHAPTER 11: Localities of magnesite occurrences.

11.1	Southern small dunite belt.	148
11.2	Northern main dunite belt.	149
11.3	Ore reserves.	153

CHAPTER 12: Magnesite mineralogy, mode of occurrence and paragenesis.

12.1	Introduction.	155
12.2	Associated minerals.	155
12.3	Mode of occurrence.	161
12.4	Structural localisation of magnesite.	165
12.5	Mechanism of deposition of magnesite.	166
12.6	Genesis of magnesite.	166
12.7	Mineral paragenesis in the present area.			169
12.8	Summary.	172

CHAPTER 13: Prospecting of magnesite.

13.1	Introduction.	174
13.2	Simpler procedure for prospecting.	174
13.3	Present approach.	175
13.4	Description of the method.	176
13.5	Techniques of observation.	177
13.6	Results of the study.	178

	<u>Page.</u>
13.7	Statistical treatment of digitised data. 180
13.8	Computational details. 181
	CHAPTER 14: Grading of magnesite ores.
14.1	Introduction. 183
14.2	Vein type of deposits. 184
14.3	Disseminated type of deposits. 184
14.4	Homogeneous deposits. 185
14.5	Surface fitting method for grade prediction. 187
14.6	Description of the computational procedure. 188
14.7	Results of computation. 188
14.8	Reserve estimation. 189
14.9	Utility of the computed grade maps. ... 189
14,10	Redundancy of attributes. 190
14.11	Summary. 191
	CHAPTER 15: Beneficiation of magnesite ores.
15.1	Uses and specifications. 192
15.2	Specifications for classification. ... 193
15.3	Procedure of beneficiation. 194
15.4	Costs of beneficiation. 194
15.5	Methods of study. 195
15.6	Results of experiments. 196
15.7	Classification procedures. 196
15.8	Mesh size of magnesite for classification experiments. 197
15.9	Pneumatic classification. 197
15.10	Conclusions. 199
15.11	Hydraulic classifier. 199
15.12	Description of hydraulic classifier. ... 199
15.13	Economics of beneficiation. 201

	<u>Page.</u>
15.14 Suggested flow sheet.	201
15.15 Concluding remarks.	202
CHAPTER 16: Synthesis.	203-210
APPENDIX:	211-212
Computer programmes listings.	211-212
1. Two dimensional trend programme.	
2. Conversion of modal to chemical analysis.	
3. Map plotting programme.	
4. Grade specification programme.	
5. Calculation of structural coefficients.	
6. Variance analysis for trends and residuals.	
7. Distance function for trend surfaces.	
8. Difference trend surface programme.	
9. Whirlpool.	

PART II.

Diagrams and Maps enclosed, separately Chapterwise.

IMPORTANT NOTE

All tables, microphotographs and diagrams of limited size are placed next to the chapter in which a reference is made for them. However the following diagrams are placed in part II of the thesis as they are large in size.

The diagrams that are placed in second part are given below:

Chapter 1	Diagram No.1.2
Chapter 2	Diagram No.2.1
Chapter 7	Diagrams Nos.7.1 to 7.6
Chapter 8	Diagrams Nos.8.1 to 8.6
Chapter 9	Diagrams Nos.9.1 and 9.2
Chapter 10	Diagrams Nos.10.1 to 10.4
Chapter 13	Diagram No.13.1
Chapter 15	Diagram No.15.1

and a diagram showing X-ray diffractograms of olivine.
