Abstract	xxii
Chapter 1 INTRODUCTION	1-8
Chapter 2 REVIEW OF LITERATURE	9-25
2.1 Edible film-forming materials	9
2.1.1 Polysaccharides and proteins	9
2.1.1.1 Polysaccharides	9
2.1.1.2 Proteins	12
2.1.2 Plasticizers	14
2.1.3 Edible grade antimicrobials	15
2.2 Properties of films developed from starch and its blend	15
2.2.1 Properties of pure starch films	15
2.2.2 Properties of starch blend films	18
2.3 Properties of films developed from cellulose ether and its blends	20
2.3.1 Films containing methylcellulose	20
2.3.1.1 Properties of pure methylcellulose films	20
2.3.1.2 Properties of methylcellulose blend films	21
2.3.2 Films containing hydroxypropylmethylcellulose	21
2.3.2.1 Properties of pure hydroxypropylmethylcellulose films	21
2.3.2.2 Properties of hydroxypropylmethylcellulose blend films	22

2.4	Effect of antimicrobials on starch and cellulose ether based films	24
2.4.1	Starch based films	24
2.4.2	Cellulose ether based films	25
Chapter 3	MATERIALS AND METHODS	26-62
3.1	Ingredients for film making	26
3.2	Experimental design	27
3.3	Preparation of blends and casting of film	27
3.4	Storing of films	29
3.5	Measurement of properties of the films	30
3.5.1	Film conditioning	30
3.5.2	Physical properties	30
3.5.2.1	Film thickness	30
3.5.2.2	Film density	30
3.5.3	Mechanical properties	31
3.5.3.1	Tensile strength and elongation at break	31
3.5.3.2	Tear resistance	33
3.5.3.3	Puncture strength	34
3.5.4	Water vapour permeability	35
3.5.5	Optical properties	36
3.5.6	Moisture sorption property	37
3.5.6.1	Preparation of different water activity environment	37
3.5.6.2	Determination of equilibrium moisture content of film	38
3.5.6.3	Fitting of EMC data to various isotherm models	38
3.5.6.4	Goodness of fit of the models	39
3.5.6.5	Net isosteric heat of sorption	39
3.6	Optimization of blend formulation	40
3.6.1	Experimental design	40
3.6.2	Regression analysis	40
3.6.3	Optimization using response surface methodology	41
3.6.4	Validation of the non linear regression model developed by software	41
3.7	Studies undertaken with optimized film composition	42
3.7.1	Effect of antimicrobial incorporation on different film properties	42

3.7.2	Measurement of thermal properties	42
3.7.2.1	Seal strength	42
3.7.2.2	Glass transition temperature	45
3.7.3	Evaluation of aroma arresting property	46
3.7.3.1	Preparation of pouches	47
3.7.3.2	Preparation of sample for serving	47
3.7.3.3	Preparation of score card and training of the judges	48
3.7.3.4	Fuzzy comprehensive modelling of sensory scores	48
3.7.4	Effect of biodegradation of film on quality of soil	57
3.7.4.1	Soil and container taken for simulated burial test	57
3.7.4.2	Soil burial test	57
3.7.4.3	Analysis of soil composition	58
3.7.4.4	Correlation between different properties	61
3.8	Statistical analysis	62
Chapter 4	RESULTS AND DISCUSSIONS	63-131
4.1	Effect of nature and concentration of functional polysaccharide on different properties of film	63
4.1.1	Film thickness	63
4.1.2	Film density	63
4.1.3	Mechanical properties	64
4.1.3.1	Tensile strength and elongation at break	64
4.1.3.2	Tear resistance and puncture strength	68
4.1.4	Water vapour permeability	70
4.1.5	Optical properties	73
4.1.6	Moisture sorption property	78
4.1.6.1	Equilibrium moisture content (EMC)	78
4.1.6.2	Fitting of EMC to various isotherm models	78
4.1.6.3	Moisture sorption isotherm (MSI)	84
4.1.6.4	Effect of temperature on MSI	84
4.1.6.5	Effect of AM, MC, and HPMC on MSI	88
4.1.6.6	Net isosteric heat of sorption	92
4.2	Optimization	93

4.2.1	Effect of independent variable on responses	93
4.2.2	Regression analysis	94
4.2.3	Optimization of level of functional polysaccharide by software	96
4.2.4	Validation of the non linear regression model developed by software	96
4.3	Properties of optimized films	99
4.3.1	Effect of antimicrobial incorporation on different film properties	99
4.3.1.1	Mechanical Properties	99
4.3.1.2	Water vapour permeability	102
4.3.1.3	Optical properties	103
4.3.1.4	Moisture sorption property	106
4.3.2	Effect of functional polysaccharide on thermal properties	114
4.3.2.1	Seal strength	114
4.3.2.2	Glass transition temperature	116
4.3.3	Effect of functional polysaccharide on aroma arresting property	119
4.3.3.1	Triplets for sensory quality of tea and tastemaker samples	119
4.3.3.2	Triplets of sensory scores for quality attributes of tea and tastemaker samples in general	119
4.3.3.3	Triplets for overall sensory score of tea and tastemaker samples	121
4.3.3.4	Membership functions of overall sensory scores on standard fuzzy scale	121
4.3.3.5	Similarity values and ranking of tea and Maggi tastemaker samples based on overall quality	122
4.3.3.6	Quality attributes ranking of tea and tastemaker samples in general	123
4.3.3.7	Quality attribute ranking of individual tea and tastemaker samples	124
4.3.4	Effect of biodegradation on quality of soil	127
4.3.4.1	Soil pH	127
4.3.4.2	Organic carbon and nitrogen	128
4.3.4.3	Humic acid	129
4.3.4.4	Water holding capacity	130
4.3.4.5	Correlation between different properties	131

5.1	Experimental plan	133
5.2	Results	136
5.2.1	Effect of nature and concentration of functional polysaccharide on different properties of film	136
5.2.2	Optimization of the blend composition	136
5.2.3	Effect of antimicrobial incorporation on different properties of film	137
5.2.4	Effect of functional polysaccharide on thermal properties	138
5.2.5	Effect of functional polysaccharide on aroma arresting property	138
5.2.6	Effect of biodegradation on quality of soil	138
5.3	Conclusions	139
