<b>Chapter 1</b>	<b>Introduction</b>	<b>1</b>
	1.1 Background	1
	1.2 Objectives and scope of the study	4
	1.2.1 Objectives	4
	1.3 Organization of the thesis	4
<b>Chapter 2</b>	<b>Review of literature</b>	<b>7</b>
	2.1 Goldfish culture and feed management	7
	2.2 Recirculating aquaculture system (RAS)	10
	2.2.1 Solid removal	11
	2.2.2 Biofilter	16
	2.2.2.1 Nitrification kinetics	21
	2.3 Major factors affecting biofilter performance	22
	A. Chemical factors	22
	i pH	22
	ii Alkalinity	23
	iii Oxygen	23
	iv Ammonia/ Nitrite concentration	24
	v Particulates and dissolved organic matter	24
	vi Biochemical oxygen demand and	25

		Chemical oxygen demand	
	vii	Salinity	26
	viii	Rate of diffusion of gaseous matter	26
	B.	Physical factors	26
	i	Temperature	26
	ii	Void ratio	28
	iii	Media selection	28
	iv	Hydraulic loading rate	29
	v	Filter depth	30
	vi	Biofilm	30
	vii	Light	31
	C.	Biological factors	31
	i	Biomass density	31
	ii	Cell yield	31
2.4		Modelling of recirculating aquaculture system	31
2.5		Economics of recirculating aquaculture system (RAS)	33
2.6		Summary of literature	34
<b>Chapter 3</b>		<b>Materials and methods</b>	<b>37</b>
3.1		Recirculating aquaculture experimental set-up	37
3.1.1		Rearing unit	38
	3.1.1.1	Rearing tank	38
	3.1.1.2	Stocking density	38
	3.1.1.3	Feed	39
	3.1.1.4	Aeration system	39
3.1.2		Solid removal unit	40
	3.1.2.1	Screen filter	41
	3.1.2.2	Foam fractionator	41
3.1.3		Nitrification unit	41
	3.1.3.1	Choice of nitrifying biofilter	42
	3.1.3.2	Choice of media for trickling filter	42
	3.1.3.3	Flow rate and sizing of trickling filter	43
	a	TAN mass balance	46

	b	Dissolved oxygen mass balance	46
	c	Suspended solid mass balance	47
	3.1.3.4	Batch culture operation	49
3.1.4		Water storage chamber and pumping devices	50
	3.1.4.1	Sump1	50
	3.1.4.2	Sump2	50
	3.1.4.3	Pumps, electric motor and starter	50
3.1.5		Experimental site and water quality monitoring	53
	3.1.5.1	Water quality measuring instruments	53
	i	Hach Hydrolab Sonde DS5 with surveyor	53
	ii	Spectrophotometer	54
	3.1.5.2	Measurement of water quality parameters	55
	i	Temperature	55
	ii	pH	55
	iii	Dissolved oxygen	56
	iv	Total ammonia nitrogen	56
	v	Nitrate –nitrogen	56
	vi	Total suspended solid	57
3.2		Development of mathematical model for an RAS	57
	3.2.1	Model Introduction	57
	3.2.2	Mathematical representations	58
	3.2.2.1	Prediction of weight, number and length of fish	58
	3.2.2.2	Prediction of water quality variables	59
	i	TAN concentration	59
	ii	NO <sub>2</sub> - N concentration	60
	iii	NO <sub>3</sub> –N concentration	61
	iv	Dissolved oxygen (DO) concentration	62

	v	Suspended solid concentration	64			
3.2.3		Calibration and evaluation of the model	67			
	3.2.3.1	Calibration of the model	67			
		a	Data set	67		
		b	Calibration procedure	67		
	3.2.3.2	Evaluation of the model	70			
	3.2.3.3	Criteria used for calibration and evaluation of model	70			
		a	Root mean square error	70		
		b	Coefficient of determination	70		
		c	Modeling efficiency	70		
	3.2.3.4	Sensitivity analysis	71			
3.3		Economic feasibility of GRAS	71			
	3.3.1	Estimation of costs and returns	72			
		3.3.1.1	Investment cost	72		
			a	Type-I items	73	
				i	Flooring and construction of rearing tank	73
				ii	GI sheet tanks and metallic screen	75
				iii	Trickling filter and foam fractionator	76
				iv	Shed	77
			b	Type-II items	77	
				i	Aeration	77
				ii	Pumps	78

	iii	Plumbing system	78
	3.3.1.2	Operating cost, return and system parameters	79
	a	Operating cost	79
	b	Return	80
	3.3.2	Economic appraisal criteria	80
	i	Payback period	81
	ii	Accounting rate of return	81
	iii	Net present value	81
	iv	Profitability index	82
	v	Internal rate of return	82
	3.3.3	Sensitivity analysis	83
<b>Chapter 4</b>		<b>Results and discussion</b>	<b>85</b>
	4.1	Performance evaluation of goldfish recirculating aquaculture system (GRAS)	85
	4.1.1	Model calibration	85
	4.1.1.1	Fish growth	86
	4.1.1.2	Water quality data	89
	a	TAN concentration	90
	b	DO concentration	91
	c	Suspended solid concentration	92
	d	Nitrate- nitrogen concentration	94
	4.1.2	Model evaluation	95
	4.1.2.1	Fish growth	95
	4.1.2.2	Water quality data	97
	a	TAN concentration	97
	b	DO concentration	99

	c	Suspended solid concentration	100
	d	Nitrate- nitrogen concentration	101
4.1.3		Sensitivity analysis of the model	102
4.1.4		Limitations of the model	103
4.3		Economics of goldfish recirculating aquaculture system	104
4.3.1		Initial investment	104
4.3.2		Operating cost	111
4.3.3		Summary of annual costs and returns of system	114
4.3.4		Economic analysis of the GRAS	118
	i	Payback period	119
	ii	Accounting rate of return	119
	iii	Net present value	119
	iv	Internal rate of return	119
4.3.5		Sensitivity analyses	120
	i	Feed cost	120
	ii	Labour charge	121
	iii	Maintenance cost	122
	iv	Electricity cost	123
	v	Initial investment	124
	vi	Survival rate	125
	vii	Sale price	126
	viii	FCR	127
	ix	Discount rate	128
<b>Chapter 5</b>		<b>Summary and conclusions</b>	<b>131</b>
5.1		Summary	131
5.2		Conclusions	136

	5.3	Future scope of the study	137
<b>References</b>			<b>139</b>
<b>Appendices</b>			<b>157</b>
A	A.1	Estimation of oxygen transfer rate	157
