Chapter 1 Introduction and Review of Literature	
1. Introduction	1
1.1. Biopolymer	1
1.1.1. Natural polymer	2
1.1.2. Synthetic polymer	2
1.1.2.1. Polyester	3
1.1.2.2. Polylactic acid (PLA)	3
1.2. Precursor of PLA	4
1.2.1. Production of LA: chemical vs microbial fermentation	4
1.2.1.1. Microbes used for LA fermentation	5
1.2.1.2. Raw material	7
1.2.2. Purification techniques of LA	7
1.3. Methods of synthesis of PLA	10
1.3.1. Direct polycondensation (DP)	10
1.3.1.1. Azeotropic condensation polymerization	11
1.3.1.2. Solid state polymerization	11
1.3.2. Ring opening polycondensation	11

1.3.2.1. Anionic polymerization	11
1.3.2.2. Cationic polymerization	12
1.3.2.3. Coordination–insertion mechanism	12
1.3.3. Choice of catalysts used for the polymerization of lactide	12
1.4. Modification of PLA	13
1.4.1. Bulk modification of PLA	14
1.4.1.1. Stereochemical and processing modification	14
1.4.1.2. Copolymerization	14
1.4.1.3. Blending	14
1.4.2. Surface modification of PLA	15
1.4.3. Incorporation of polyphenolic acid in PLA	16
1.5. Characterization of PLA	17
1.6. Application of PLA	17
1.6.1. Packaging and other commercial applications	17
1.6.2. Textile applications	18
1.6.3. Environmental applications	18
1.6.4. Medical applications	18
1.6.4.1. Scaffold application	19
1.6.4.2. Different types of scaffold fabrication	19
1.7. Scope and identification of problem	20
1.8. Objectives of the present work	22

Chapter 2 Materials and Methods

2. Materials and methods	
2.1. Materials	23
2.1.1. Substrates	23
2.1.2. Microorganism	24
2.1.3. Instruments and apparatus	24
2.1.4. Design of bioreactor	26
2.1.5. Chemicals	28

2.1.6. Accessories	28
2.2. Methods	29
2.2.1. Proximate analysis of the substrates	29
2.2.1.1. Moisture content of the substrates	29
2.2.1.2. Ash content of the substrates	29
2.2.1.3. Lactose estimation of cheese whey	29
2.2.1.4. Total carbohydrate estimation of potato waste and fruits of <i>Zizyphus oenophlia</i>	30
2.2.1.5. Estimation of protein content of the substrates	31
2.2.2. Media preparation	31
2.2.2.1. Growth and maintenance of <i>Lactobacillus</i> <i>amylophilus</i> GV6 in MRS medium	31
2.2.2.2. Minimal modified MRS medium for fermentation of LA	31
2.2.3. Fermentation of LA	32
2.2.3.1. Submerged fermentation	32
2.2.3.2. Slurry state fermentation	32
2.2.3.3. Solid state fermentation (SSF)	32
2.2.3.4. Selection of process parameters for submerged, slurry state and solid state fermentation	32
2.2.3.5. Optimization of LA fermentation using statistical technique	33
2.2.3.6. Scale-up study for LA production	34
2.2.4. Extraction of LA	34
2.2.5. Estimation of LA	34
2.2.6. Purification of LA	35
2.2.6.1. Fractionation of LA containing fermented broth through ultrafiltration	35
2.2.6.2. Purification of LA through ion exchange chromatography	35
2.2.7. Polymerization of LA	37

2.2.7.1 Effect of different catalysts on polymerization of LA	37
2.2.7.2. Polymerization of LA in presence of HA	37
2.2.8. Polymer film preparation for characterization study	37
2.2.9. Scaffold fabrication technique and its optimization	37
2.2.9.1. Scaffold fabrication using hot molding technique	38
2.2.9.2. Scaffold fabrication using porogen leaching method	38
2.2.9.3. Scaffold fabrication using hot molding coupled with porogen leaching method	38
2.2.10. Characterization of purified LA	39
2.2.10.1. High performance liquid chromatography (HPLC) profile of LA	39
2.2.10.2. Circular dichroism (CD) spectropolarimeter study of purified LA	39
2.2.11. Characterization of PLA	40
2.2.11.1. Molecular weight determination of PLA	40
2.2.11.2. Particle size distribution of PLA	40
2.2.11.3. UV-Vis diode array spectrophotometer study of commercial and synthesized PLA	41
2.2.11.4. Fourier transform infrared spectroscopic (FTIR) study of commercial and synthesized PLA	41
2.2.11.5. X-ray Diffraction analysis (XRD) of commercial and synthesized PLA	41
2.2.11.6. Mechanical property of synthesized PLA	42
2.2.11.7. Thermogravimetric analysis (TGA) of synthesized PLA	42
2.2.11.8. Differential scanning calorimetry (DSC) of synthesized PLA	42
2.2.11.9. Antioxidant property of synthesized PLA	43
2.2.11.10. Scanning electron microscopic (SEM) studies of commercial and synthesized PLA	44
2.2.11.11. Atomic force microscopic (AFM) studies of	45

commercial and synthesized PLA	
2.2.11.12. Water absorption properties of commercial and synthesized PLA	45
2.2.11.13. Contact angle studies of commercial and synthesized PLA	45
2.2.11.14. Pore size and porosity determination of synthesized PLA	46
2.2.11.15. Degradation studies of synthesized PLA	46
2.2.11.16. Study of extent of degradation of synthesized PLA	46
2.2.11.17. Liquid chromatography-mass spectroscopy (LC-MS) studies of synthesized PLA	47
2.2.11.18. Cell culture experiments on synthesized PLA	47
2.2.11.19. MTT assay	47
2.2.11.20. Fluorescence microscopic study of synthesized PLA	48
2.2.12. Statistical analysis	48
 Chapter 3 Lactic acid production from renewable resources	
3. Introduction	49
3.1. Fermentation	49
3.2. Characterization of the substrate	50
3.2.1. Proximate analysis	50
3.2.2. Ultimate analysis	50
3.3. One-variable-at-a-time study (OVAT) on LA production from different substrates	51
3.3.1. Effect of incubation period	51
3.3.2. Effect of particle size on solid state fermentation in <i>Zizyphus oenophlia</i>	52
3.3.3. Effect of salt concentration of MRS media/solid:liquid ratio	53
3.3.4. Effect of pH	53

3.3.5. Effect of inoculum volume	54
3.3.6. Effect of temperature	55
3.3.7. Effect of calcium carbonate (CaCO ₃) on submerged fermentation of cheese whey	55
3.4. Optimization study using response surface methodology	56
3.4.1. Optimization studies on submerged fermentation of cheese whey using RSM	56
3.4.1.1. Experimental results	56
3.4.1.2. Analysis of variance	57
3.4.1.3. Analysis of response surface plots	57
3.4.2. Optimization using RSM for LA fermentation from slurry state fermentation of potato waste	59
3.4.2.1. Experimental results	59
3.4.2.2. Analysis of variance	60
3.4.2.3. Analysis of response surface plots	60
3.4.3. Optimization of LA fermentation from solid state fermentation of fruits of <i>Zizyphus oenophlia</i> using RSM	61
3.4.3.1. Experimental results	61
3.4.3.2. Analysis of variance	62
3.4.3.3. Analysis of response surface plots	62
3.5. Comparative efficacies of different substrates for LA fermentation	64
3.6. Fermentation of LA in new designed bioreactor (BCBLA) of 1L capacity	65
3.7. Comparison of new bioreactor (BCBLA) and closed vessel bioreactor (CVB)	65
3.8. Sequential scaling up of LA production	66
3.9. Discussion	67

4. Introduction	77
4.1. Steps for purification of LA from the fermented broth	78
4.1.1. Centrifugation	78
4.1.2. Ultrafiltration	79
4.1.3. Ion exchange chromatography	80
4.1.3.1. Effect of pH of fermented broth on LA binding	80
4.1.3.2. Binding capacity of LA on the resin	80
4.1.3.3. Breakthrough curve of LA	81
4.1.3.4. Determination of strength of HCl on LA binding	82
4.1.3.5. Cation exchange chromatography	82
4.2. Characterization of the purified LA	83
4.2.1. UV-Vis spectrophotometer	83
4.2.2. Circular dichroism spectropolarimeter	84
4.3. Discussion	84
Chapter 5 Application of lactic acid for polylactide synthesis	
5. Introduction	93
5.1. Rationale for selection of HA	93
5.2. Synthesis of PLA	95
5.2.1. Screening of catalyst during polymerization of LA	95
5.2.1.1. Polymerization using different stannous salts as catalyst	95
5.2.1.2. Polymerization using other metal salts as catalyst	96
5.2.1.3. Polymerization using different acids as catalysts	96
5.2.1.4. Polymerization using catalyst combination	96
5.2.1.5. HA mediated PLA synthesis in presence and absence of sulphuric acid as catalyst	98
5.2.1.6. Effect of different concentrations of HA on the polymerization of LA	98
5.2.1.7. Effect of temperature on polymerization	99
5.2.1.8. Effect of reaction time on polymerization	100

5.3. Characterization of the PLA-HA polymer	100
5.3.1. Physical characterization and product identification	101
5.3.1.1. Elemental analyses	101
5.3.1.2. FTIR spectroscopy	101
5.3.1.3. X-Ray diffraction (XRD)	103
5.3.1.4. UV-Vis spectroscopy	104
5.3.1.5. Dynamic light scattering	106
5.3.2. Thermal characterization	106
5.3.2.1. Thermogravimetric analysis (TGA)	106
5.3.2.2. Differential scanning calorimetry (DSC)	109
5.3.3. Mechanical property	110
5.3.4. Functional properties of PLA-HA	110
5.3.4.1. Determination of total phenolic content	111
5.3.4.2. Determination of antiradical activity of the PLA-HA	111
5.3.5. Surface property	111
5.3.5.1. Scanning electron microscopy (SEM)	111
5.3.5.2. Atomic force microscopy (AFM)	112
5.3.5.3. Water absorption property	114
5.3.5.4. Determination of the contact angle	115
5.4. Discussion	116

Chapter 6 Application of PLA-HA as scaffold and its biocompatibility study

6. Introduction	127
6.1. Fabrication of PLA scaffold	127
6.1.1. Hot molding	128
6.1.1.1. Effect of temperature on molding process	128
6.1.1.2. Effect of molding time	129
6.1.2. Porous scaffold fabrication by using porogen	130
6.1.2.1. Effect of different porogens	130
6.1.2.2. Effect of time of leaching	131
6.1.2.3. Effect of different concentrations of porogen	132

6.1.2.4. Effect of size of porogen	133
6.1.3. Porous scaffold fabrication by hot molding using porogen	134
6.2. Characterization of PLA-HA scaffold	135
6.2.1. Mechanical property	136
6.2.2. Study of swelling behavior of the PLA-HA scaffold	136
6.3. PLA-HA scaffold degradation study	137
6.3.1. Biotic degradation	138
6.3.2. Abiotic degradation	138
6.3.3. Physico-chemical characterization of the degraded scaffold and the degradation products in PBS	139
6.3.3.1. Morphological characterization	140
6.3.3.1.1. Scanning electron microscopy	140
6.3.3.1.2. Atomic force microscopy	141
6.3.3.2. Fourier transform infrared spectroscopy	143
6.3.3.3. LC-MS	144
6.4. Cytocompatibility study of the PLA-HA scaffold	146
6.4.1. Cell viability study	146
6.4.2. Cell attachment and cell proliferation	147
6.4.2.1. Scanning electron microscopy	147
6.4.2.2 Fluorescence microscopy	149
6.5. Discussion	150
Conclusion	165
Reference	169
Appendix	191
