	Contents	xv-xviii
1	Introduction	
	1.1 Background	1
	1.2 Objective	3
	1.3 Organization of the thesis	3
2	Review of Literature	
	2.1 Sewage	7
	2.2 Phytoremediation of contaminated water using aquatic plant	9
	2.3 Advantage of aquatic plant based wastewater treatment system	10
	2.4 Types of aquatic plants	11
	2.5 Floating aquatic macrophyte (FAM)	12
	2.6 Nutrient and organic matter removal by floating aquatic plant	12
	2.7 Heavy metal removal by aquatic plant	17
	2.8 Selection of aquatic plant for wastewater treatment system	21
	2.9 Use of harvested aquatic plant as a source of bioenergy	22
	2.10 Biofuels	23
	2.11 Indian status of biofuel production and potential	23
	2.12 Generations of bioethanol	25
	2.12.1 First-generation bioethanol	25
	2.12.2 Second-generation bioethanol	25
	2.12.3 Third-generation bioethanol	26
	2.13 An overview of bioethanol feedstocks	26
	2.14 Bioethanol from lignocelluloses	27
	2.15 Composition of lignocellulosic biomass	27
	2.16 Structure of lignocellulosic biomass	29
	2.17 Production of bioethanol from lignocellulosic biomass	30

Contents		Page No.
	2.17.1	Pretreatment 30
	2.17.2	Hydrolysis 30
	2.17.2.1	Chemical hydrolysis 31
	2.17.2.2	Enzymatic hydrolysis 32
	2.17.2.3	Enzymatic hydrolysis of cellulose 32
	2.17.2.4	Enzymatic hydrolysis of hemicelluloses 33
	2.17.2.5	The cellulase of <i>Trichoderma reesei</i> Rut-C30 33
	2.17.3	Fermentation 35
	2.18	Statistical optimization approach 37
3	Materials and Methods	
	3.1	Statistical experimental design 39
	3.2	Experimental set up 41
	3.2.1	Configuration of the oxidation pond/tank 41
	3.2.2	Operation of the oxidation pond 42
	3.3	Biomass harvesting in oxidation pond 42
	3.4	Heavy metal preparation for synthetic wastewater 42
	3.5	Experimental condition for removal of heavy metal in batch studies 43
	3.6	Sample preservation for analysis of heavy metal 44
	3.7	Analysis 44
	3.7.1	pH 44
	3.7.2	Dissolved Oxygen and Temperature 44
	3.7.3	Chemical oxygen demand 44
	3.7.4	NH ₄ ⁺ -N, NO ₃ ⁻ -N and Total Kjeldhal Nitrogen (TKN) 44
	3.7.5	NO ₂ ⁻ -N 45
	3.7.6	Phosphate 45
	3.8	Digestion of plant root and leaves for heavy metal analysis 44
	3.9	SEM and EDX for heavy metal analysis in plant 46
	3.10	Biomass preparation for pretreatment for production bioethanol 46
	3.10.1	Pretreatment procedure 46
	3.10.2	Reaction condition for each pretreatment 47
	3.11	Enzyme hydrolysis 47
	3.12	Characterization of native and acid pretreated <i>Salvinia cucullata</i> 48
	3.12.1	Scanning electron microscopy (SEM) 48
	3.12.2	Fourier Transform Infrared Spectroscopy (FTIR) 48
	3.13	Microorganism 48
	3.13.1	Fungal strain 48
	3.13.2	Yeast strain for bioethanol production 48

Contents		Page No.
3.14	Media	48
3.14.1	Media for growth of <i>Trichoderma reesei</i> Rut C30	48
3.14.2	Media for growth of yeast strain	49
3.14.3	Media for cellulose and xylanase production	49
3.14.4	Media for inoculum preparation of yeast strain	49
3.15	Inoculum preparation for cellulase and xylanase production	49
3.16	Fermentation process	49
3.17	Yeast inoculum preparation for fermentation	49
3.18	Simultaneous saccharification and fermentation	50
3.19	Methods used for biochemical analysis of substrates for bioethanol production	50
3.19.1	Determination of moisture content	50
3.19.2	Determination of ash content	50
3.19.3	Determination of lignin content	50
3.19.4	Determination of cellulose	51
3.19.5	Hemicellulose estimation	51
3.19.6	Determination of Reducing Sugar by DNS method	52
3.19.7	Extraction of cellulose and xylanase	52
3.19.8	Assay of Carboxymethyl cellulose/CMCase	52
3.19.9	Activity calculation of carboxymethyl cellulose	53
3.19.10	Procedure for assay of xylanase	53
3.19.11	Activity calculation xylanase	54
3.19.12	Determination of ethanol content by gas chromatography (GC)	54
4	Treatment of sewage in oxidation pond containing aquatic plant <i>Salvinia cucullata</i>	
4.1	Statistical optimization experiments	55
4.2	Statistical analysis	56
4.2.1	Estimation of effect of variables	56
4.2.2	Statistical model for the response	58
4.3	Effect of operating parameters on the response COD removal rate	61
4.4	Nutrient removal	64
4.4.1	N removal	64
4.4.2	P removal	66
4.5	Biomass growth under different operating condition	68
4.6	Numerical optimization	70
4.7	Validation	71
4.8	Heavy metal removal	73
4.8.1	Removal of Cd	74

Contents		Page No.
4.8.2	Removal of Zn	76
4.8.3	Removal of Cu	77
4.8.4	Removal of Cr	78
4.9	Microstructure Investigation	81
4.10	Heavy metal removal in continuous mode	83
4.10.1	Removal of Cd	84
4.10.2	Removal of Zn	84
4.10.3	Removal of Cu	84
4.10.4	Removal of Cr	84
4.11	COD removal efficiency	86
4.12	Nitrogen removal efficiency	86
4.13	Phosphate removal efficiency	87
4.14	Summary	88
5	Production of bioethanol from <i>Salvinia cucullata</i>	
5.1	Background	89
5.2	Chemical composition of <i>Salvinia cucullata</i>	89
5.3	Comparison of biomass pretreatment efficiencies	90
5.3.1	NaOH pretreatment	91
5.3.2	Acid pretreatment	91
5.3.3	Oxidative pretreatment	93
5.3.4	Ultrasonication	93
5.4	SEM analysis	94
5.5	FTIR analysis	95
5.6	Selection of parameters for SSF pretreated substrate	96
5.6.1	Selection of substrate concentration for SSF of pretreated substrate	96
5.6.2	Selection of inoculum volume for SSF of pretreated substrate	97
5.6.3	Selection of inoculum age for SSF of pretreated substrate	98
5.6.4	Selection of incubation time for SSF of pretreated substrate	98
5.7	Optimization of simultaneous saccharification and fermentation of pretreated substrate	99
5.7.1	Experimental design	99
5.8	Statistical analysis of data	100
5.9	Response surface plot analysis	104
5.10	Verification of optimal condition for SSF of pretreated substrate	108
5.11	Cost estimation of treated wastewater fed aquaculture	109
5.12	Cost estimation of <i>Salvinia cucullata</i> based wastewater treatment pond and aquaculture	110

Contents		Page No.
5.11	Cost estimation of treated wastewater fed aquaculture	109
5.12	Cost estimation of <i>Salvinia cucullata</i> based wastewater treatment pond and aquaculture	110
5.13	Summary	114
6	Conclusions and future scope of the studies	
6.1	Conclusions	115
6.1.1	Statistical optimization of experiment	115
6.2	New Research contributions	117
6.3	Future scope of studies	117
	References	119
	Curriculum vitae	134
