Chapter 1	Introduction	1
Chapter 2	Literature Review	5
2.1	Quantification of Water Flow Components in the Cropped Field	5
2.2	Water Balance Studies in the Cropped Field	9
2.3	Water Management Strategies for the Cropped Field	9
2.4	Rainwater Harvesting in the Reservoir	11
2.5	Rice-Fish Integration	11
2.6	Design of the On-Farm-Reservoir	12
2.7	Economic Analysis of the On-Farm-Reservoir System	16
2.8	Critiques on Literature Review	17
Chapter 3	Theoretical Study	20
3.1	Quantification of Water Flow Components in the Cropped Field	20
3.1.1	HYDRUS-2D model	21
3.1.2	HYDRUS-2D model simulations	22
3.1.2.1	Space and time discretizations	22
3.1.2.2	Boundary and initial conditions	24
3.2	Modelling Water Balance Parameters in the Cropped Field	25
3.2.1	Formulation of field water balance model	25
3.2.1.1	Ponding depth	27
3.2.1.2	Actual evapotranspiration	27
3.2.1.3	Surface runoff	29
3.2.1.4	Vertical percolation and lateral seepage	29
3.2.1.5	Bare soil evaporation during germination period of rice	30
3.2.1.6	Bare soil evaporation during turn-in and germination period of mustard	31
3.2.2	Simulation of field water balance model	31
3.3	Modelling Water Balance Parameters of the OFRs	34

Chapter	Title	Page	
	3.3.1	Formulation of the OFR water balance model	34
	3.3.2	Specifications of the OFR	36
	3.3.2.1	Volume of the OFR storage	36
	3.3.2.2	Wetted surface area of the OFR	38
	3.3.2.3	Top water surface area of the OFR	39
	3.4	Sizing of the OFR for Integrated Farming	39
	3.5	Economic Analysis of the OFR System for Integrated Farming	40
	3.5.1	Initial investment	42
	3.5.1.1	Cost of construction of the OFR	42
	3.5.1.2	Material cost for the OFR lining	42
	3.5.1.3	Labor cost for lining	42
	3.5.2	The OFR maintenance cost	42
	3.5.3	Land equivalent cost	43
	3.5.4	Irrigation cost	43
	3.5.5	Production cost and annual returns from integrated farming system	43
	3.5.6	Present worth analysis	44
	3.5.7	Net profit of the OFR system	45
	3.5.8	Benefit-cost ratio of the OFR system	45
	3.5.9	Pay back period of the OFR system	45
	3.6	Model Evaluation	45
Chapter 4		Experimental Study	47
	4.1	General	47
	4.1.1	Location of the experimental site	47
	4.1.2	Experimental set up and farming practices	47
	4.1.3	Soil	53
	4.1.4	Meteorological parameters	53
	4.1.5	Crop and fish	58
	4.1.6	Farming practices	59
	4.1.7	Irrigation strategies	60
	4.1.8	Production of rice, fish, and mustard	62
Chapter 5		Results and Discussions	64
	5.1	Simulation of Water Flow in the Cropped Field	64
	5.1.1	Calibration and validation of HYDRUS-2D model	64
	5.1.1.1	Soil moisture content	65
	5.1.2	Vertical percolation and lateral seepage in the cropped field	66
	5.2	Simulation of Water Balance Parameters in the Cropped Field	83
	5.2.1	Soil moisture content and ponding depth	84
	5.2.2	Actual crop evapotranspiration	86
	5.2.3	Surface runoff	90

Chapter	Title	Page
5.2.4	Supplemental irrigation requirement	91
5.3	Simulation of the On-farm Reservoir Water Balance Model	92
5.3.1	The OFR inflows	93
5.3.1.1	Rainfall contribution	97
5.3.1.2	Surface runoff contribution	97
5.3.2	The OFR outflows	97
5.3.2.1	Evaporation loss	97
5.3.2.2	Pre-sowing/supplemental irrigation	100
5.3.2.3	Seepage and percolation	100
5.4	Sizing of the OFR System	100
5.4.1	Simulation of water balance parameters of the OFR	101
5.4.2	Simulation of capacity of the OFR	109
5.4.3	Probability analysis for sizing of the OFR	109
5.4.4	Economic analysis	115
5.4.4.1	Factors of Economic analysis	115
5.4.4.1.1	Initial investment	115
5.4.4.1.2	Annual costs	116
5.4.4.1.3	Returns from the OFR System	116
5.4.4.2	Economic parameters for viability study	117
5.5	Transfer of Technology	120
Chapter 6	Conclusions and Future Scope of Study	122
6.1	Conclusions	122
6.2	Contributions from the Study	124
6.3	Future Scope of Study	125
