

CONTENTS

	Page
INTRODUCTION	1
General description, Theory of Ball mill operation, Modifications of the Ball mill, Some latest designs, Novel grinding techniques, Mechanism of size reduction, Efficiency of crushing operation, Measurement of particle size, Scope of the present investigation.	
PART I - MEASUREMENT OF SURFACE AREA ...	18
Importance of surface measurement, Methods of surface measurement, Permeability method, Turbidimetry, Screen analysis :- (i) Bond method, (ii) Calculation from differential screen analysis, (iii) Calculation from cumulative screen analysis, Results and discussion.	
PART II - BATCH OPERATION OF BALL MILL WITHOUT CLASSIFICATION ...	48
Effect of time of grinding, Effect of mill speed, Effect of feed size, Effect of feed quantity, Effect of ball size, Effect of ball mixture, Effect of different grinding media, Effect of ball load, Effect of ball density, Effect of moisture, Effect of hardness of feed material, Conclusion.	
PART III - BATCH GRINDING WITH AIR CLASSIFICATION ...	103
(Continuous removal of product without adding new feed)	
Effect of vacuum, Effect of ball load, Effect of feed quantity,	
PART IV - OPEN CIRCUIT GRINDING ...	115
Experimental technique, Determination of steady state conditions for continuous grinding, Effect of vacuum, Degree of accuracy, in material balance, Effect of suction, Air velocity used in the present work, Effect of mill speed, Effect of ball load, Effect of initial feed charge in mill, Effect of grinding medium, Distribution function/sizing test. Conclusion.

	Page
PART V - CLOSED CIRCUIT GRINDING ...	146
Experimental procedure, Effect of product size, Effect of circulating load, Effect of ball load, Effect of different grinding media, Effect of initial feed charge, Conclusion, Comparison of batch, open and closed circuit grinding.
