Chapter	Content	Page No
	Title Page	i
	Declaration	ii
	Certificate	iii
	Acknowledgement	v
	List of symbols	vi – viii
	List of abbreviations	ix – x
	Abstract	xi – xii
	Contents	xiii – xvii
	List of figures	xviii – xix
	List of tables	xx
1	Introduction	1 – 8
1.1	Composition of tea leaves and black tea	1
1.2	Steps in black tea processing	2
1.3	Changes in leaves during withering	3
1.4	Physicochemical changes during oxidation of tea	4
1.5	Factors affecting oxidation of tea	4
1.6	Justification and scope	5
1.7	Objectives	8
2	Review of Literature	9 – 23
2.1	Composition of tea leaves and black tea	9
2.2	Physicochemical changes in leaf during withering	13

2.3	Influence of withering conditions on black tea quality	14
2.4	Details of oxidation reaction	15
2.5	Mass transfer of gasses during oxidation reaction	17
2.6	Influence of oxidation conditions on black tea quality	18
2.7	Humidification of air	21
2.8	Salient points from Review of Literature	23
3	Materials and Methods	25 – 53
3.1	Development of Environment Control Chamber	25
3.1.1	Description of the environment control chamber	26
3.1.2	Blower capacity	29
3.1.3	Air heater capacity	29
3.1.4	Refrigeration unit capacity	30
3.1.5	Water heater capacity	30
3.2	Selection of clone of tea for the study	30
3.3	Method of CTC maceration and orthodox rolling of tea leaves for experiments	31
3.4	Optimization of withering conditions based on enzyme activity in leaf	32
3.4.1	Plucking of leaves and withering	32
3.4.2	Enzyme assay of PPO and PO	33
3.4.3	Modeling of independent and dependent parameters using Artificial Neural Network	34
3.4.4	Optimization of withering conditions using Genetic	37

	Algorithm	
3.5	Measurement of mass transfer coefficient and mass diffusivity of O ₂ and CO ₂ during oxidation of macerated tea leaves	39
3.5.1	Withering and maceration of leaves	39
3.5.2	Oxidation of macerated leaves	39
3.5.3	Calculation of molar flux of O ₂ and CO ₂	44
3.5.4	Surface area for mass transfer of O ₂ and CO ₂	45
3.5.5	Mass transfer coefficient and diffusivity	47
3.6	Effects of air temperature and thickness of bed during oxidation on the changes in catechin content and its oxidized products in tea	49
3.6.1	Withering and maceration of leaves	49
3.6.2	Oxidation of macerated leaves	50
3.6.3	HPLC analysis of catechins in black tea	50
3.6.4	Analysis of tea samples for total TF and TR	51
3.6.5	Modeling of catechin depletion	52
3.6.6	Modeling of change in TF and TR content during oxidation	53
4	Results and Discussion	55 –100
4.1	Performance of Environment Control Chamber	55
4.2	Optimization of withering conditions based on enzyme activity in leaf	58
4.2.1	Change in enzyme activity and moisture content during withering	58
4.2.2	Results obtained from the Genetic Algorithms	62

4.3	Measurement of mass transfer coefficient and mass diffusivity of O ₂ and CO ₂ during oxidation of macerated tea leaves	69
4.3.1	Surface area available for mass transfer of O ₂ and CO ₂	69
4.3.2	Mass transfer coefficient and mass diffusivity	71
4.4	Effect of parameters of oxidation on catechins and oxidized compounds	73
4.4.1	Analysis of oxidizing macerated CTC and rolled orthodox leaves using HPLC	73
4.4.2	Changes in catechin content during oxidation of macerated CTC and rolled orthodox leaves	77
4.4.3	Modeling of catechin depletion during oxidation of macerated CTC and rolled orthodox leaves	82
4.4.4	Changes in theaflavin content during oxidation of macerated CTC and rolled orthodox leaves	85
4.4.5	Changes in thearubigin content during oxidation of macerated CTC and rolled orthodox leaves	91
4.4.6	Modeling of change in TF and TR content during oxidation of macerated CTC and rolled orthodox leaves	94
5	Summary and Conclusions	101 – 107
5.1	Development of environment control chamber	101
5.2	Change in enzyme activity during withering	101
5.3	Optimization of independent parameters for withering	102
5.4	Measurement of mass transfer coefficient and mass	102

	diffusivity for gas exchange during oxidation	
5.5	Effect of oxidation parameters on catechin content	103
5.6	Modeling of catechin degradation during oxidation	103
5.7	Effect of oxidation parameters on theaflavin (TF) and thearubigin (TR) content	104
5.8	Modeling of change in TF and TR content during oxidation	104
5.9	Conclusions	105
5.10	Future Scope of work in Tea research	107
