Contents

Table of Contents **xvii**

Author's Biography **xxi**

List of Figures **xxiii**

List of Symbols and Abbreviation **xxv**

1 Introduction **1**
- 1.1 Formation and Dynamics of superpeer networks . . . 2
- 1.2 Challenges in p2p networks and limitations of the classical approach . 4
  - 1.2.1 Complex network as a toolbox . . . 6
  - 1.2.2 Objectives of the thesis . . . 7
- 1.3 Contribution of the thesis . . . 8
- 1.4 Organization of the thesis . . . 10

2 Literature survey **11**
- 2.1 Introduction to peer-to-peer networks . . . 11
  - 2.1.1 Limitations of unstructured systems: superpeer networks . . . 14
  - 2.1.2 Superpeer networks design . . . 15
  - 2.1.3 Networks modeling . . . 17
- 2.2 Dynamics on peer-to-peer networks . . . 20
  - 2.2.1 Churn in p2p networks . . . 20
  - 2.2.2 Attack and defence strategies in p2p networks . . . 22
  - 2.2.3 Network stability in the perspective of complex networks . . . 25
  - 2.2.4 Scopes of work . . . 35
- 2.3 Dynamics of peer-to-peer networks . . . 36
  - 2.3.1 Bootstrapping protocols . . . 36
  - 2.3.2 Network growth in the perspective of complex network theory 40
  - 2.3.3 Local events in emerging p2p networks . . . 45
  - 2.3.4 Scope of work . . . 49
- 2.4 Conclusion . . . 49

3 Churn and stability of superpeer networks **51**
3.1 Introduction . . . 51
3.2 Environment definitions . . . 52
3.2.1 Modeling superpeer networks . . . 53
3.2.2 Churn and attack models . . . 55
3.2.3 Stability metric . . . 57
3.2.4 Simulation environment . . . 59
3.3 Developing analytical framework using generating function formalism 60
3.4 Stability of superpeer networks against churn . . . 66
3.4.1 Stability analysis against degree independent failure . . . 66
3.4.2 Superpeer networks against degree independent failure . . . 67
3.4.3 Stability analysis against degree dependent failure . . . 74
3.4.4 Superpeer networks against degree dependent failure . . . 75
3.5 Conclusion . . . 77

4 Attack and stability of superpeer networks **79**
4.1 Development of the analytical framework . . . 81
4.1.1 Deformed topology after attack . . . 81
4.1.2 Critical condition for stability . . . 83
4.2 Effect of attacks upon the superpeer networks . . . 84
4.2.1 Analysis of deterministic attack . . . 85
4.2.2 Analysis of degree dependent attack . . . 94
4.2.3 Physical interpretation of the attack exponent γ . . . 102
4.2.4 Impact of network size on the percolation threshold . . . 104
4.3 Effect of attacks upon the commercial Gnutella Networks . . . 105
4.3.1 Attacks on Gnutella networks . . . 106
4.4 Stability analysis for degree correlated networks . . . 111
4.4.1 Deformed topology after attack . . . 112
4.5 Conclusion . . . 117

5 Emergence of superpeer networks in face of bootstrapping **119**
5.1 Introduction . . . 119
5.2 Bootstrapping protocols . . . 121
5.3 Formalism for fixed bandwidth . . . 122
5.3.1 Emergence of superpeer nodes . . . 125
5.3.2 Simulation results and inference derivation . . . 126
5.4 Formalism for variable bandwidth . . . 131
5.4.1 Simulation results and inference derivation . . . 134
5.5 Case study with Gnutella network . . . 136
5.5.1 Modifying the formalism with finite size WebCache . . . 138
5.6 Conclusion and design guidelines to the network engineers . . . 139

6 Emergence of superpeer networks in face of churn and link rewiring 141
6.1 Introduction 141
6.2 Modeling bootstrapping and other node/link dynamics 143
6.3 Development of growth model in face of peer churn 145
6.3.1 Special case: growth without peer churn 149
6.3.2 Simulation results and inference derivation 153
6.3.3 Impact of peer churn 153
6.4 Development of growth model in face of peer churn and link rewiring 158
6.4.1 Simulation results and inference derivation 162
6.5 Formalism for variable cutoff degrees with peer churn and rewiring . . 165
6.6 Case study with Gnutella network 171
6.7 Conclusion 173

7 Conclusion and Future work 175
7.1 Summary of our contributions 175
7.1.1 Stability analysis 176
7.1.2 Network emergence 177
7.2 Future directions 178
