Chapter 1	Introduction	1-4
Chapter 2	Review of Literature	5-23
	2.1 Development of Synthetic Unit Hydrographs using Geomorphologic Parameters of Watersheds	5
	2.1.1 Extraction of watershed parameters using GIS technique	5
	2.1.2 Development of Synthetic Unit Hydrographs	6
	2.2 Curve Number Technique for Runoff Estimation using RS and GIS	7
	2.2.1 Curve Number Technique	7
	2.2.2 Runoff Estimation using RS and GIS	8
	2.3 Nonpoint Source Pollution (NPS)	8
	2.3.1 Hydrological and NPS pollution models	9
	2.3.1.1 Field scale models	10
	2.3.1.2 Event based watershed scale models	11
	2.3.1.3 Continuous time stepped watershed scale models	12
	2.3.2 Selection of Models	17
	2.4 Remote Sensing and GIS in Hydrologic and NPS Pollution Modeling	18
	2.4.1 Land use and land cover delineation	18
	2.4.2 Remote sensing and GIS in sediment yield and watershed management studies	18
	2.4.3 Application of GIS in hydrologic and NPS pollution modeling	19
	2.4.3.1 Hydrologic parameter determination	19
	2.4.3.2 GIS linked hydrologic and NPS pollution models	19
	2.4.4 Identification of and Prioritization of Critical Areas of Watershed	21
	2.4.5 Effective management of watershed	21

	2.5 Critiques on Review of Literature	22
Chapter 3	Theoretical Considerations	24–38
	3.1 Distributed Curve Number Method	24
	3.2 Geomorphologic Parameters	26
	3.2.1 Drainage basin system	26
	3.2.1.1 Basin size	26
	3.2.1.2 Basin shape	27
	3.2.1.3 Basin relief	28
	3.2.1.4 Basin texture	28
	3.2.1.5 Basin slope	29
	3.2.1.6 Hypsometry	30
	3.2.2 Channel system	30
	3.2.2.1 Stream ordering	30
	3.2.2.2 Branching relationships	31
	3.2.2.3 Oscillatory characteristics	32
	3.2.2.4 Channel fall	32
	3.3 AnnAGNPS: Annualized Agricultural Non Point Source Pollution Model	33
	3.3.1 Model Overview	33
	3.3.2 Hydrology Component	33
	3.3.2.1 Runoff	33
	3.3.2.2 Peak rate of runoff	34
	3.3.3 Sediment Transport Component	37
	3.3.4 Nutrient Transport Component	38
Chapter 4	Materials and Methods	39–95
	4.1 Study Area	39
	4.1.1 Climate	40
	4.2 Facilities Aailed for the Study	42
	4.2.1 Toposheet	42
	4.2.2 Soil map	42
	4.2.3 Satellite data	42
	4.2.4 Hardware and software	43
	4.3 Data Acquisition	44
	4.3.1 Meteorological data	44
	4.3.2 Hydrological data	44
	4.3.2.1 Runoff measurement	44
	4.3.2.2 Sediment yield measurement	46
	4.3.2.3 Nutrient	46
	4.3.3 Soil Analysis	47

4.4 Extraction of Geomorphologic Parameters of Watersheds Using Remote Sensing and GIS	47
4.4.1 Topographic map registration and digitization	50
4.4.2 Extraction of watershed boundary	50
4.4.3 Extraction of drainage network and stream ordering	50
4.4.4 Elevation contour map	52
4.4.5 Drainage basin size, shape and relief parameters	52
4.4.6 Watershed grids	56
4.4.7 Grid wise slope, aspect and curvature	57
4.5 Development of Different Thematic Layers Using Remote Sensing and GIS	60
4.5.1 Land use/ land cover classification	60
4.5.2 Soil coverage	62
4.5.3 Curve number coverage	63
4.6 Distributed Versus Composited Curve Number Approach	65
4.7 Derivation of Unit Hydrograph	65
4.7.1 Selection of Storm	65
4.7.2 Base Flow Separation	66
4.7.3 Determination of Rainfall Excess and Derivation of Unit Hydrograph	66
4.8 Synthetic Unit Hydrograph	67
4.9 Modeling Unit Hydrograph Parameters with Geomorphologic Parameters of the Watershed	70
4.9.1 Development of Correlation Matrix between UH Parameters and Geomorphologic Parameters of the Watershed	70
4.9.2 Development of best fit regression equations	71
4.9.3 Development of non-linear regression models for UH parameters	71
4.9.4 Evaluation of developed models with the observed UH	71
4.9.5 Validation of the developed models in nearby watersheds	72
4.10 AnnAGNPS Model	72
4.10.1 Input data preparation for AnnAGNPS	73
4.10.1.1 Watershed details	73
4.10.1.2 Hydrologic details	75
4.10.1.3 Cell information	76
4.10.1.4 Hydrological parameters	77
4.10.1.5 Soil information	79

4.10.1.6 Upland drainage information	80
4.10.1.7 Channel parameters	82
4.10.1.8 Agricultural management parameters	82
4.10.1.9 Other cell parameters	85
4.10.2 Outputs of AnnAGNPS model	87
4.10.3 Calibration of AnnAGNPS Model	88
4.10.4 Validation of AnnAGNPS Model	89
4.10.5 Sensitivity Analysis of Model Input Parameters	90
4.10.6 Model Evaluation Criteria	91
4.10.7 Identification and Prioritization of Critical Sub-watersheds	93
4.10.8 Effective Management Strategy for Critical Sub-watersheds	94
Chapter 5 Results and Discussions	96-178
5.1 Land Use/ Land Cover Classification	96
5.2 Geomorphologic Study of the Watersheds	102
5.3 Modeling Unit Hydrograph Parameters with Geomorphologic Parameters	105
5.3.1 Development of correlation matrix between UH parameters and geomorphologic parameters of the watershed	106
5.3.2 Development of best least equations using least square technique	106
5.3.3 Development of nonlinear models for UH parameters	109
5.3.4 Evaluation of developed non-linear models for different rainfall events	112
5.3.5 Validation of developed non-linear models in nearby watershed	117
5.4 Runoff Computation using CN Technique	123
5.5 Calibration of AnnAGNPS Model	128
5.5.1 Simulation of runoff	131
5.5.2 Simulation of peak flow rate	134
5.5.3 Simulation of sediment yield	137
5.5.4 Simulation of nutrient loss	140
5.6 Sensitivity analysis of input parameters of AnnAGNPS model	144
5.6.1 Runoff	144
5.6.2 Peak flow rate	145
5.6.3 Sediment yield	145
5.7 Validation of AnnAGNPS Model	148

5.7.1 Simulation of runoff	148
5.7.2 Simulation of peak rate of runoff	153
5.7.3 Simulation of sediment yield	157
5.7.4 Simulation of nutrient loss	162
5.8 Identification and Prioritization of Critical Sub-watersheds	170
5.9 Effective Management Strategy for Critical Sub-watersheds	172
5.9.1 Formulation of LU/LC based alternative BMPS	172
5.9.2 Formulation of agronomy based alternative BMPS	175
5.9.2.1 Fertilizer and tillage effect on runoff, sediment yield and nutrient loss	175
Chapter 6 Summary and Conclusions	179-188
5.1 Summary	179
5.2 Conclusions	187
References	189-199
Brief Curriculum Vitae	200
