<i>Abstract</i>	<i>ix</i>
<i>Contents</i>	<i>x</i>
Chapter 1: Introduction	1-25
1.1. Composites	1
1.1.1. Types of conventional reinforcing fillers for polymers	2
1.1.2. Low aspect ratio fillers (aspect ratio ~1)	3
1.1.3. High aspect ratio fillers (aspect ratio ≥ 100) or fibrous fillers	3
1.1.4. Platelet shaped fillers	4
1.2. Nanocomposites	4
1.2.1. Nanocomposites compared to conventional filled polymers	5
1.2.2. Nanofillers	6
1.2.3. Attapulgit (AT)	7
1.3. Hybrid composites	7
1.4. Durability	8
1.5. Rolling resistance	10
1.6. Literature search	10
1.6.1. Short fiber–rubber composites	14
1.6.2. Fibrous clay (Attapulgit)- nanocomposites	15
1.7. Scope and objectives	17
1.8. References	
Chapter 2: Experimental	27-38
2.1. Materials	27
2.2. Heat treatment of fibers	27
2.3. Modification of attapulgit (AT)	28
2.4. Preparation of fiber reinforced macro- and nanocomposites	29
2.5. Preparation of hybrid composites	30
2.6. Experimental methods	30
2.7. References	38
Chapter 3: Effect of heat setting on the properties of nylon 6 tire cords	39-62
3.1. Introduction	39
3.2. Results and discussion	40
3.2.1. Thermal shrinkage	41
3.2.2. Mechanical and dynamic mechanical properties	43
3.2.3. Effect of heat setting on crystal structure	52
3.2.4. Effect of heat setting on residual shrinkage	58
3.3. Conclusions	60

3.4. References	61
Chapter 4: Effect of heat-setting on polyester tire cords	63-87
4.1. Introduction	63
4.2. Results and discussion	64
4.2.1. Thermal shrinkage	64
4.2.2. Mechanical and dynamic mechanical properties	67
4.2.3. Effect of heat setting on crystal structure	77
4.2.4. Effect of heat setting on residual shrinkage	83
4.3. Conclusions	84
4.4. References	86
Chapter 5: Modification of fibrous nanoclay, attapulgite	89-96
5.1. Introduction	89
5.2. Modification of clay	90
5.3. Results and discussion	90
5.3.1. FTIR of clays	90
5.3.2. TGA of clays	91
5.3.3. XRD of clays	92
5.3.4. Surface area of clays	93
5.3.5. Morphology of clays	93
5.4. Conclusions	95
5.3. References	96
Chapter 6: Preparation and properties of macro and nanocomposites with different modified fibers	97-122
6. Introduction	97
6.1. Development of NR-short organic fiber composites	97
6.1.1. Results and discussion	97
6.1.1.1. Effect of different fillers on physico-mechanical properties	98
6.1.1.2. Dynamic mechanical properties of different fiber composites	99
6.1.1.3. Thermal properties of different composites	101
6.1.1.4. Morphology of different fiber composites	102
6.1.1.5. Effect of fiber loading on physical properties	103
6.1.2. Summary	104
6.2. Development of NR-fibrous clay nanocomposites	105
6.2.1 Results and discussion	106
6.2.1.1. Physico-mechanical properties of rubber-AT nanocomposites	106
6.2.1.2. Dynamic mechanical properties of AT-nanocomposites	109
6.2.1.3. Thermal and morphological properties of AT-nanocomposites	117
6.2.2. Summary	121
6.3. Summary and conclusions	121
6.4. References	122
Chapter 7: Preparation and properties of hybrid macro and nanocomposites with special reference to tire applications	123-145
7.1. Introduction	123
7.2. Results and discussion	124

7.2.1. Hybrid composites based on organic fiber	124
7.2.2. Hybrid composites based on inorganic nanofiber	134
7.2.3. Crack growth test under fatigue loading	141
7.3. Summary and Conclusions	143
7.4. References	144
Chapter 8: Rolling resistance measurement of hybrid nanocomposites using finite element analysis	147-164
8.1. Introduction	147
8.2. Theoretical background	148
8.3. Material modeling of rubber	151
8.4. Hyperelastic material property	152
8.5. Experimental	153
8.5.1. Materials	153
8.5.2. Evaluation of hyperelastic properties	153
8.5.3. Evaluation of viscoelastic properties	154
8.6. Results and discussion	154
8.6.1. Hyperelastic modeling	154
8.6.2. Viscoelastic material modeling	156
8.6.3. Elastic Simulation	158
8.6.4. Rolling resistance measurement	161
8.7. Conclusions	162
8.8. References	163
Chapter 9: Summary and conclusions	165-168
9.1. Summary and Conclusions	165
9.2. Contribution of the thesis	167
9.3. Future scope of the study	168
