

Contents

Table of Contents	xix
List of Symbols and Abbreviation	xxiii
1 Introduction	1
1.1 Importance of Manganese Bearing Resources	2
1.2 Low and Medium Grade Manganese Resources	3
1.3 Manganese:Usage Pattern & Relevance to Optimization Approaches	4
1.4 Processing of Lean Manganese Bearing Ores	6
1.4.1 Terrestrial manganese ores	7
1.4.2 Polymetallic sea nodules	9
1.5 Implications of Previous Work: Scope of the Present Work	19
1.5.1 Flowsheet optimization for nodules processing	19
1.5.2 Dissolution kinetics: Data driven modeling approach	20
1.5.3 Objective of the work	22
2 Multi-objective Optimization and Data Driven Models	25
2.1 Introduction	25
2.2 Multi-Objective Optimization	25
2.2.1 Fundamentals and Terminology	25
2.2.2 Dominance and Pareto-Optimality	26
2.2.3 Techniques:Search and Decision Making	29
2.2.4 Classical Techniques	30
2.3 Genetic and Evolutionary Algorithms	31
2.3.1 Evolutionary and Classical Optimization Algorithms	32
2.3.2 Genetic and Evolutionary Algorithms: BasicPrinciples	33
2.3.3 Evolutionary Algorithms for Multi-ObjectiveOptimization	35
2.4 Overview of Evolutionary Algorithms	38
2.4.1 Nondominated Sorting Differential EvolutionAlgorithm	38
2.4.2 Real Coded Predator-Prey Genetic Algorithm	39
2.4.3 New Multi-objective Genetic Algorithm (NMGA)	41
2.4.4 Non-Dominated Sorting Genetic Algorithm(NSGA-II)	45
2.4.5 Particle Swarm Optimization (PSO)	47
2.4.6 Multi-Objective Genetic Algorithm-II (MOGA-II)	49
2.5 Data Driven Modeling	51
2.5.1 Evolutionary Neural Network	52
2.5.2 Genetic Programming	54

2.6	Summary	57
3	Ammonical Route for Processing of Sea Nodules	59
3.1	Introduction	59
3.2	Process Chemistry and Flowsheet	60
3.2.1	Process Chemistry	60
3.2.2	Process FlowSheet	61
3.3	Development of Process Simulation Model	63
3.3.1	Flow Topology and Its Allied Details	64
3.3.2	Solution Methodology	66
3.4	Development of Process Optimization Approach	68
3.5	Results and Discussion	71
3.5.1	Multi-Objective Analysis of Process Schemes	72
3.6	Conclusion	82
4	Acid Leaching Route for Processing Sea Nodules	85
4.1	Introduction	85
4.2	Process Scheme and Dissolution Kinetics	86
4.2.1	Process Chemistry	86
4.2.2	Process Scheme	87
4.3	Optimization Strategy	89
4.3.1	Simulation of the Reductive Leaching Process	90
4.3.2	Solution Methodology	92
4.3.3	Process Optimization	94
4.4	Results and Discussion	97
4.4.1	Multi-Objective Analysis of Process Schemes	97
4.5	Conclusion	102
5	Leaching Data Analysis with Evolutionary Techniques	105
5.1	Introduction	105
5.2	Leaching Chemistry	106
5.3	Modeling the Leaching Process	107
5.3.1	Constructing the Neural Net	108
5.3.2	The Analytical Model	109
5.4	Multi-Objective Optimization : Formulation	111
5.5	Comparison of Models for Leaching Process	113
5.5.1	The Glucose Case	113
5.5.2	The Sucrose Case	119
5.5.3	The Lactose Case	121
5.6	Summary and Conclusion	125
6	Data Driven Models for Leaching Data Analysis	127
6.1	Introduction	127
6.2	Leaching of Lean Grade Manganese Sources:Chemistry	128
6.3	Constructing the Data Driven Models	129
6.3.1	Evolutionary Neural Network	129
6.3.2	Genetic Programming	130

6.3.3	<i>modeFRONTIER™</i> : Multi-Objective Optimization Software .	132
6.4	Multi-Objective Optimization : Formulation	132
6.5	Results and Discussion	133
6.5.1	Analyzing carbonate leaching	133
6.5.2	Analyzing the Leaching of Manganiferous Ores	143
6.6	Conclusion	168
7	Summary, Conclusions and Scope for Future work	169
7.1	Summary of Contributions	169
7.1.1	Optimization of Process Routes for Extraction of Manganese	170
7.1.2	Dissolution Kinetics for Lean Grade Manganese Ores	174
7.2	Contribution of the Thesis	176
7.3	Future Directions	177
	Bibliography	179
	Appendix A Data Sets Used for Data Driven Modeling	193
	Appendix B List of Publications	201
